Lectures on Antitrust Economics Michael D.

Whinston, 2008-01-25 Antitrust law regulates economic activity but differs in its operation from what is traditionally considered regulation Where regulation is often industry specific and involves the direct setting of prices product characteristics or entry antitrust law focuses more broadly on maintaining certain basic rules of competition In these lectures Michael Whinston offers an accessible and lucid account of the economics behind antitrust law looking at some of the most recent developments in antitrust economics and highlighting areas that require further research He focuses on three areas price fixing in which competitors agree to restrict output or raise price horizontal mergers in which competitors agree to merge their operations and exclusionary vertical contracts in which a competitor seeks to exclude a rival Antitrust commentators widely regard the prohibition on price fixing as the most settled and economically sound area of antitrust Whinston's discussion seeks to unsettle this view suggesting that some fundamental issues in this area are in fact not well understood In his discussion of horizontal mergers Whinston describes the substantial advances in recent theoretical and empirical work and suggests fruitful directions for further research The complex area of exclusionary vertical contracts is perhaps the most controversial in antitrust The influential Chicago School cast doubt on arguments that vertical contracts could be profitably used to exclude rivals Recent theoretical work to which Whinston has made important contributions instead shows that such contracts can be profitable tools for exclusion Whinston's discussion sheds light on the controversy in this area and the nature of those recent theoretical contributions Sponsored by the Universidad Torcuato Di Tella
