

Chapter IX

Market Structure and Antitrust

This chapter introduces industrial organization economics—the study of firm behavior under various market conditions ranging from perfect competition to monopoly. Earlier chapters have provided the foundation for the material covered here. Chapter II showed how the basic supply-and-demand model can provide valuable insights regarding market reactions to changes in legal rules and regulations. Chapter I introduced standard assumptions regarding individual utility maximization and firm profit maximization. In particular, the underlying assumptions of consumer choice were examined. This chapter examines in detail some of the factors that determine an individual firm's response to changes in market conditions as well as changes in legal rules and regulations.

Section A examines firm production decisions, with an emphasis on the underlying relationships that determine costs of production. Section B examines how firms behave under various competitive market conditions, first considering the benchmark cases of perfect competition and monopoly, and later more realistic models of competition that involve product differentiation and oligopolistic interdependence.

A. Costs & Production

Producers of any good or service are faced with the constant task of adjusting their output in response to changes in market conditions. The effectiveness of a firm in responding to changes in market demand is in part determined by its ability to alter the quantity and mix of inputs used in its production process. In analyzing the ability of firms to alter their input use, economists distinguish between the short-run and the long-run. We discuss each of the scenarios below.

1. Short-Run Production

In the short-run, at least one input used in the production process cannot be altered. Inputs that can be altered within the short-run are called variable resources. Inputs that cannot be altered within the short-run are called fixed resources. Thus, in the short-run, firm output can be adjusted by changing the variable resources used, but some of the necessary resources are fixed and cannot be altered in response to changes in the desired output level. Traditionally, this distinction has led to a separation of the costs of production into two components: fixed and variable costs. Fixed costs are those that do not vary with
