Autonomic Neuroimmunology John Bienenstock, M. Blennerhassett, E. Goetzel, 2003-02-13 While it may appear that the nervous and immune systems exist as two separate entities groundbreaking observations have positively identified anatomic connections between elements of the nervous system and cells of adaptive immunity Building on this research Autonomic Neuroimmunology presents a scientific discussion of the current understanding of these vital neuroimmunological interactions and their implications for normal psychology and disease states Contributors document the cell biological mechanisms for the neuropeptide activation of mast cells and analyze how one or more adrenergic and peptidergic messengers modulate immunity They also explain the pathways by which cholinergic factors may suppress immunological inflammation The potential implications of organ system selective neuroimmunology for host defense and diseases are thoroughly discussed for the skin the intestines the bladder and the lungs With modern neuroimmunology now firmly established as a scientific discipline this volume supports this promising science as a pathway to novel diagnostic and therapeutic techniques for diseases of the neural immune and endocrine systems

Psychoneuroimmunology Robert Ader, 2007 Psychoneuroimmunology is the study of interactions among behavioral neural and endocrine and immunologic processes of adaptation These two volumes provide a clearly written extensively referenced summary of some of the behavioral neural and endocrine regulators of immune responses and immunologically mediated disease processes and of the behavioral and neuroendocrine effects of immune system activity Several chapters expand upon topics reviewed in earlier editions of this series most chapters cover active areas of research that have not previously been reviewed As illustrated in this fourth edition interdisciplinary research continues to provide evidence that the brain and immune system represent a single integrated system of defense

Recent Advances in Psychiatry from Psycho-Neuro-Immunology Research: Autoimmunencephalitis, Autoimmune-Encephalopathy, Mild Encephalitis Karl Bechter, David Brown, Souhel Najjar, 2019-08-12 Growing evidence derived from cerebrospinal fluid CSF neuropathological imaging genetic and epidemiological studies link neuroinflammation and immune dysregulation to a subset of individuals with a variety of severe mental disorders SMDs including affective and non affective psychotic disorders Further the recent discoveries of neuronal surface antibodies NSAs in autoimmune encephalitis AE presenting with diverse neuropsychiatric disorders such as psychosis and cognitive decline among many others provides further support to the notion that CNS autoimmunity and neuroinflammation can contribute to the neurobiology of psychiatric disturbances Further these immune mechanisms may

contribute to a subset of patients currently diagnosed as having treatment resistant SMDs such as schizophrenia and major depressive disorder. Additionally mounting data indicate that various infections can serve as an immunological trigger of aberrant immune responses presumably by causing release of excess neural antigen thereby giving rise to NSAs or aberrant immune cellular responses to give rise to primary or secondary psychiatric disorders such as schizophrenia and those associated with AE respectively. Collectively these findings support the mild encephalitis hypothesis of SMD. The significant overlap among AE associated psychosis, systemic autoimmune disorder associated psychosis and psychotic disorders associated with pathological processes involving inflammation and immune dysregulation has also prompted some authors to adopt the term autoimmune psychosis AP. This term reflects that this psychosis subtype is mechanistically linked to complex neuroimmune and inflammatory signalling abnormalities that can be responsive to early immunomodulatory treatment. It also suggests that a subset of AP might represent an incomplete or forme fruste subtype of AE presenting with dominant or pure psychiatric symptoms mimicking primary psychiatric illnesses. Because data indicate that delayed diagnosis and treatment may lead to permanent sequelae, early recognition of AP utilizing neurodiagnostic workup e.g. CSF analysis, neuroimaging and EEG and its early treatment with appropriate immunotherapy are paramount to a meaningful recovery. This eBook will provide an overview of the current knowledge and research areas from epidemiology, risk factors and diagnosis to the management of these conditions in this rapidly emerging field, helping to bridge the gaps in knowledge that currently exist in the disciplines of Psychiatry, Neurology and Neuroimmunology.

A Primer of Neuroimmunological Disease Andrew R.

Pachner, 2012-02-18. A Primer of Neuroimmunological Disease is a significant new resource for anyone interested in conditions such as multiple sclerosis (MS), myasthenia gravis and neurological infections.
