   **Autopoiesis and Cognition** H.R. Maturana,F.J. Varela,2012-12-06 This is a bold brilliant provocative and puzzling work It demands a radical shift in standpoint an almost paradoxical posture in which living systems are described in terms of what lies outside the domain of descriptions Professor Humberto Maturana with his colleague Francisco Varela have undertaken the construction of a systematic theoretical biology which attempts to define living systems not as they are objects of observation and description nor even as in teracting systems but as self contained unities whose only reference is to them selves Thus the standpoint of description of such unities from the outside i e by an observer already seems to violate the fundamental requirement which Maturana and Varela posit for the characterization of such system namely that they are autonomous self referring and self constructing closed systems in short autopoietic systems in their terms Yet on the basis of such a conceptual method and such a theory of living systems Maturana goes on to define cognition as a biological phenomenon as in effect the very nature of all living systems And on this basis to generate the very domains of interac tion among such systems which constitute language description and thinking     **Autopoiesis and Cognition** H.R.
