Autopsy Of A Suicidal Mind:

Autopsy of a Suicidal Mind Edwin S. Shneidman, **Suicide Explained** Federico Sanchez, 2007-12-14 Finally a book that explains suicide a must read for the survivors of suicide who want to understand why suicide happens and it also should prove extremely helpful for anyone suffering mental disorders The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic hardly covered in medical schools It is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the authors fourth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders In this book on suicide the author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical communitys standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in every day language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These leads to a learned discussion of how these various systems can go haywire leading to mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnestic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth Finally he gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations He closes with some important suggestions of how to lessen suicide rates particularly among the young *Understanding Suicide and Its Prevention*

Federico Sanchez, 2010-06-15 Finally a book that explains suicide using the latest research in suicidology. A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens. The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular. This is an important book for all professionals who deal with mental disorders in general and suicide in particular. It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders. The author begins with a brief summary of the statistics of the whos, the hows, and the wheres of suicide. This gives us a clear idea of the magnitude of the problem of suicide, of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole. Then, as an important first step to understanding the medical community's standard approaches to mental disease, he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders. He presents the most accepted current theories and models of suicide. He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation. And he explains how suicide risk assessment is currently done along with other important considerations. He proceeds to explain in everyday language, where possible, his theory of how the brain works, beginning with a simple explanation of how neurons communicate with each other. Later he explains how the brain controls the body and how we see with the back of our heads, how memory systems become a logical extension or expansion of our sensory and motor systems. Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking, reasoning, and constructing our past, our lives, and our identities. But all this would mean nothing without the introduction of emotions and how the brain constructs contexts. He explains how emotions are an integral part of memories and how these are related to contexts, how basically the brain has created a very concise and compact filing memory system. A clear explanation of how emotions are triggered, regulated, and dissipated is next. These lead to a learned discussion of how these various systems can go haywire, causing mental disorders. A brief but perhaps new and revolutionary approach to these mental disorders is presented next, including Obsessive Compulsive Disorder, Delirium, Dementia, and Other Amnesic Disorders, Manic Depression, and Depression, and Schizophrenia. Ultimately, it becomes clear how under certain conditions these disorders can lead to suicide. The difference between attempters and completers is also explained. He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth. The fallacy of many expert opinions of where research needs to go is presented. The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations. The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail, and another chapter on suicide prevention. The

author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

Suicidal Behavior Richard McKeon, 2022-04-11 A new edition with the latest approaches to assessment and treatment of suicidal behavior With more than 800 000 deaths worldwide each year suicide is one of the leading causes of death The second edition of this volume incorporates the latest research showing which empirically supported approaches to assessment management and treatment really help those at risk Updates include comprehensively updated epidemiological data the role opioid use problems personality disorders and trauma play in suicide new models explaining the development of suicidal ideation and the zero suicide model This book aims to increase clinicians access to empirically supported interventions for suicidal behavior with the hope that these methods will become the standard in clinical practice The book is invaluable as a compact how to reference for clinicians in their daily work and as an educational resource for students and for practice oriented continuing education Its reader friendly structure makes liberal use of tables boxed clinical examples and clinical vignettes The book which also addresses common obstacles in treating individuals at risk for suicide is an essential resource for anyone working with this high risk population

Suicide Michael Cholbi, 2011-08-26 Suicide was selected as a Choice Outstanding Academic Title for 2012 Suicide The Philosophical Dimensions is a provocative and comprehensive investigation of the main philosophical issues surrounding suicide Readers will encounter seminal arguments concerning the nature of suicide and its moral permissibility the duty to die the rationality of suicide and the ethics of suicide intervention Intended both for students and for seasoned scholars this book sheds much needed philosophical light on one of the most puzzling and enigmatic human behaviors

Myths about Suicide Thomas Joiner, 2011-11-30 Around the world more than a million people die by suicide each year Yet many of us know very little about a tragedy that may strike our own loved ones and much of what we think we know is wrong This clear and powerful book dismantles myth after myth to bring compassionate and accurate understanding of a massive international killer Drawing on a fascinating array of clinical cases media reports literary works and scientific studies Thomas Joiner demolishes both moralistic and psychotherapeutic clichés He shows that suicide is not easy cowardly vengeful or selfish It is not a manifestation of suppressed rage or a side effect of medication Threats of suicide far from being idle are often followed by serious attempts People who are prevented once from killing themselves will not necessarily try again The risk for suicide Joiner argues is partly genetic and is influenced by often agonizing mental disorders Vulnerability to suicide may be anticipated and treated Most important suicide can be prevented An eminent expert whose own father's death by suicide changed his life Joiner is relentless in his pursuit of the truth about suicide and deeply sympathetic to such tragic waste of life and the pain it causes those left behind

Phenomenology of Suicide Maurizio Pompili, 2017-10-10 This book will help the reader to understand the suicidal mind from a phenomenological point of view shedding light on the feelings of suicidal individuals and also those of clinicians In accordance with the importance that the phenomenological approach attaches to

subjectivity and sense of self as the starting points for knowledge emphasis is placed on the need for the clinician to focus on the subjective experiences of the at risk individual to set aside prior assumptions judgments or interpretations and to identify ways of bridging gaps in communication associated with negative emotions The vital importance of empathy is stressed drawing attention to the insights offered by neuroimaging studies and the role of mirror neurons in social cognition It is widely acknowledged that when a clinician meets a person who wants to die by suicide the clinician does not fully understand what is going on inside the mind of that individual This book recognizes that any approach to suicide prevention must promote understanding of suicidal thoughts and feelings The awareness that it fosters and the innovative perspectives that it presents will appeal to a wide readership **Child and Adolescent Suicidal Behavior** David N. Miller, 2011-03-03 This book has been replaced by **Child and Adolescent Suicidal Behavior Second Edition** ISBN 978 1 4625 4658 9 The International Handbook of Suicide Prevention Rory C. O'Connor, Jane Pirkis, 2016-10-31 The International Handbook of Suicide Prevention 2nd Edition presents a series of readings that consider the individual and societal factors that lead to suicide it addresses ways these factors may be mitigated and presents the most up to date evidence for effective suicide prevention approaches An updated reference that shows why effective suicide prevention can only be achieved by understanding the many reasons why people choose to end their lives Gathers together contributions from more than 100 of the world's leading authorities on suicidal behavior many of them new to this edition Considers suicide from epidemiological psychological clinical sociological and neurobiological perspectives providing a holistic understanding of the subject Describes the most up to date evidence based research and practice from across the globe and explores its implications across countries cultures and the lifespan *The Final Leap* John Bateson, 2012-04-18 The Golden Gate Bridge is one of the most photographed structures in the world It's also the most deadly Since it opened in 1937 more than 1 500 people have died jumping off the bridge making it the top suicide site on earth This title leads us on a journey that uncovers the reasons for the design decision that led to so many deaths **Advancing Suicide Research** Kairi Kõlves, Merike Sisask, Peeter Värnik, Airi Värnik, Diego De Leo, 2021-11-30 In this book leading researchers provide an overview of current best practices in the conduct of suicide research They describe quantitative qualitative and mixed methods approaches in suicide prevention research from a public health perspective In addition other aspects that are crucial to effective suicide research are examined including definitional issues historical background and ethical aspects The clearly written chapters include both theoretical and practical information along with specific examples from different areas of suicide research and prevention This volume is ideal for researchers students and academics interested in suicide research as well as policy makers clinicians and other practitioners **Care of the Suicidal Person** John R. Cutcliffe, Chris Stevenson, 2007-01-01 This title is directed primarily towards health care professionals outside of the United States This book is based on a three year qualitative study a study that was funded by the United Kingdom Department of Health that investigated how psychiatric nurses provided care

for suicidal people Drawing on service user data this book contains and explains an evidence based empirically induced theory of how to care for suicidal people Far from being an esoteric theory with no clinical applicability the findings captured in this book are grounded in the reality of day to day practice Furthermore in addition to tracing the role of nurses in caring for suicidal people the authors use their findings to launch into formal level issues regarding future research education and policy as well as focusing on the ethical issues involved in care of the suicidal person The authors close by shifting the focus on suicide survivors and with the help of contributing authors As the eminent suicidology scholars who have generously provided their Forewords note this is a must read book for anyone involved in the care of the suicidal person **The**

Scripting Suicide in Japan Kirsten Cather,2024-10-15 A free ebook version of this title is available through Luminos University of California Press s Open Access publishing program Visit www.luminosoa.org to learn more Japan is a nation saddled with centuries of accumulated stereotypes and loaded assumptions about suicide Many pronouncements have been made about those who have died by their own hand without careful attention to the words of the dead themselves Drawing upon far ranging creations by famous twentieth and twenty first century Japanese writers and little known amateurs alike such as death poems suicide notes memorials suicide

maps and manuals works of literature photography film and manga Kirsten Cather interrogates how suicide is scripted and to what end Entering the orbit of suicidal writers and readers with care she shows that through close readings these works can reveal fundamental beliefs about suicide and just as crucially about acts of writing These are not scripts set in stone but graven images and words nonetheless that serve to mourn the dead straddling two impulses to put the dead to rest and to keep them alive forever These words reach out to us to initiate a dialogue with the dead one that can reveal why it matters to write into and from the void *The Oxford Handbook of Suicide and Self-injury* Matthew Nock, 2014 This handbook provides a comprehensive summary of the most important and exciting advances in our understanding of suicide and self injury and our ability to predict and prevent it
