Avian Diseases ,1979 Without a Tear Mark H. Bernstein,2010-10-01 In *Without a Tear* Mark H Bernstein begins with one of our most common and cherished moral beliefs that it is wrong to intentionally and gratuitously inflict harm on the innocent Over the course of the book he shows how this apparently innocuous commitment requires that we drastically revise many of our most common practices involving nonhuman animals Most people who write about our ethical obligations concerning animals base their arguments on emotional appeals or contentious philosophical assumptions Bernstein however argues from reasons but carries little theoretical baggage He considers the issues in a religious context where he finds that Judaism in particular has the resources to ground moral obligations to animals *Without a Tear* also makes novel use of feminist ethics to add to the case for drawing animals more closely into our ethical world Bernstein details the realities of factory farms animal based research and hunting fields and contrasting these chilling facts with our moral imperatives clearly shows the need for fundamental changes to some of our most basic animal institutions The tightly argued provocative claims in *Without a Tear* will be an eye opening experience for animal lovers scholars and people of good faith everywhere

The Prokaryotes M.P. Starr, H. Stolp, H.G. Trüper, A. Balows, H.G. Schlegel, 2013-11-11 The purpose of this brief Foreword is to make you the reader hungry for the scientific feast that follows These two volumes on the prokaryotes offer a truly unique scientific menu a comprehensive assembly of articles exhibiting the biochemical depth and remarkable physiological and morphological diversity of prokaryote life The size of the volumes might initially discourage the unprepared mind from being attracted to the study of prokaryote life for this landmark assemblage thoroughly documents the wealth of present knowledge But in confronting the reader with the state of the art the Handbook also defines where new work needs to be done on well studied bacteria as well as on unusual or poorly studied organisms There are basically two ways of doing research with microbes A classical approach is first to define the phenomenon to be studied and then to select the organism accordingly Another way is to choose a specific organism and go where it leads The pursuit of an unusual microbe brings out the latent hunter in all of us The intellectual challenges of the chase frequently test our ingenuity to the limit Sometimes the quarry repeatedly escapes but the final capture is indeed a wonderful experience For many of us these simple rewards are sufficiently gratifying so that we have chosen to spend our scientific lives studying these unusual creatures

Investigation and Management of Disease in Wild Animals G.A. Wobeser, 2013-04-17 A hypothesis is a proposition set forth as an explanation for the occurrence of a phenomenon that can be tested The basis for scientific investigation is the collection of information to formulate and test hypotheses Experimental methods measure the effect of manipulations caused by the investigator observational methods collect information about naturally occurring events There are three sub types of experimental techniques that differ in the way subjects are chosen for inclusion in the study in the amount of control that the investigator has over variables and in the method used to assess changes in other variables Descriptive observational studies dominate the early phase of most investigations and involve the description of disease related events in the population Associations among factors may be observed but the strength of the associations is not measured Analytical observational techniques are of three basic types prevalence surveys case control studies and incidence or cohort studies All attempt to explain the nature of relationships among various factors and to measure the strength of associations Prevalence surveys and case control studies deal with disease existing at the time of the study incidence studies are concerned with the development of disease over time Observational studies may be retrospective using existing data or prospective with collection of new information
