Awakening The Inner Eye Intuition In Education:

Awakening the Inner Eye Nel Noddings, Paul J. Shore, 1998 Developing Teachers Chris Day, 2002-01-04 Effective schools or improving schools are fashionable terms in the rhetoric of recent education movements yet the heart of these movements is often more to do with teaching quality than with school practice This book takes a holistic view of teacher development examining the contexts and conditions of teaching school leadership and culture teachers lives and histories change teacher learning competence and expertise and the moral purposes of teaching Day looks at the conditions under which teacher development may be enhanced and brings together research and other information from the UK and overseas

Teachers and Teaching Post-COVID Katy Marsh-Davies, Cathy Burnett, 2023-11-23 Featuring a broad swathe of academic research and perspectives from international contributors this book will capture and share important lessons from the pandemic experience for teaching practice and teacher learning more broadly Looking at core teaching values such as the facilitation of learning the promotion of fairness and equality and community building the book centres the records of teachers experiences from diverse educational phases and locations that illuminate how the complexity of teaching work is entangled in the emotional relational and embodied nature of teachers everyday lives Through rich qualitative data and first hand experience the book informs the decisions of teachers and those who train support and manage them promoting sustainable positive transformation within education for the benefit of educators and learners alike This book will be of use to scholars practitioners and researchers involved with teachers and teacher education the sociology of education and teaching and learning more broadly Policy makers working in school leadership management and administration may also benefit from the volume *Teaching and Learning Mathematical Problem Solving* Edward A. Silver, 2013-04-03 A provocative collection of papers containing comprehensive reviews of previous research teaching techniques and pointers for direction of future study Provides both a comprehensive assessment of the latest research on mathematical problem solving with special emphasis on its teaching and an attempt to increase communication across the active disciplines in this area The Challenge to Care in Schools, 2nd Edition Nel Noddings, 2015-04-26 After a decade of educational reforms The Challenge to Care in Schools is even more relevant now than when it was first published In her new Introduction Nel Noddings revisits her seminal book and places care as central to current debates on standardization accountability privatization and the continuous struggle between traditional and progressive methods of education Rather than forcing one side to yield to the other this book advocates an alternative responsive system that will allow the best ideas to flourish In the Second Edition Noddings once again envisions a school system built on the idea that different people have different strengths and that these strengths should be cultivated in an environment of caring not of competition She suggests that if we make the responsiveness characteristic of caring more basic than accountability we can accommodate both traditional and progressive preferences in one school system to the benefit of all especially the children Chapters address the practical and theoretical questions

involved in organizing traditional and nontraditional areas of study around themes of care Introductory chapters focus on caring in general and on the problems of liberal education while the final chapter offers sound advice for implementing a caring curriculum in our schools Praise for the First Edition A welcome addition to the often fragmented discussion of what children need and what school and education should be Harvard Educational Review I recommend this book to all concerned about education personally and or professionally Journal of Moral Education In the morass of school reform that calls for such changes as national standards improved assessments and new ways of organizing schooling Noddings provides lucid thinking about the priorities we ought to consider Teachers College Record

The Curriculum Studies Reader David J. Flinders, 2004 Grounded in historical essays this volume provides context for the growing field of curriculum studies reflecting on dominant trends in the field sampling the best of current scholarship

Re-Symbolization of the Self: Human Development and Tarot Hermeneutic I. Semetsky, 2011-07-23 Bringing together popular and academic cultures Inna Semetsky presents Tarot as a system of transformative hermeneutics for adult self education and cultural pedagogy Her research is a decisive and intelligent step ahead from the reductive stereotype of Tarot as fortune telling The fifteen life stories at the heart of the book exemplify the author's commitment to alternative modes of education and counseling that transcend individual cultural or language barriers Assembling a rich array of sources from Hermeticism to Jungian depth psychology the philosophies of Noddings Buber and Deleuze and the science of self organization this book opens a new path to personal and social revitalization It should be widely read across disciplinary divides by scholars students and professionals alike

Re-Thinking Reason Kerry S. Walters, 1994-09-08 For two decades colleges and universities have regularly offered and in some cases required courses in thinking skills Such courses generally have focused on training students in the basics of informal and formal logic the assumption being that good thinking is logical thinking and that instruction in critical or good thinking consequently should emphasize logical procedures This logistic assumption is clearly reflected in both critical thinking textbooks as well as in the professional literature Recently however the epistemic and pedagogical identification of critical thinking and logical thinking has been questioned by educators from a wide diversity of disciplines Many of these critics argue that a richer more comprehensive model of thinking itself is needed one that acknowledges the importance of traditionally downplayed faculties such as empathy imagination and insight Others contend that thinking skills theory and pedagogy must take into consideration the contextual and sometimes political influences upon not just content but also styles of thinking finally still other critics of the conventional model of critical thinking argue that recent research in feminist studies sheds a great deal of light upon the directions in which critical thinking instruction should go The fourteen essays in this anthology all illustrate this new way of thinking about critical thinking Each of them is critical of the received model and each of them argues for one that goes beyond the conventional reduction of thinking skills to logical expertise But each approaches the issue from a different angle thereby providing the reader with a diversity of

perspectives and accents *Re Thinking Reason* is an invaluable resource tool research guide and supplemental textbook for educators across the disciplines who are concerned with incorporating thinking skills instruction in their classes

Educating for Humanity Mike Seymour, Henry M. Levin,2015-11-17 At a time of profound crises around the world when social justice peace democracy and the environment seem under increasing threat the promise of a world for all seems a viable aspiration for education Ample evidence from many schools today and dating back throughout the last century prove that the purpose of educating young people to develop character compassion purpose and commitment is integral with the mastery of intellectual skills and life competencies Schooling without a doubt can play a monumental part in the development of the personal values people take with them to the world Unfortunately as the saying goes if you don t know where you re going you ll probably get someplace else Educational policy directions over the last twenty years have veered far away from the important work of educating for humanity This book makes a powerful appeal to revisit educational purpose in light of what is most fundamental and important to human beings everywhere The authors address timely issues such as high stakes testing school choice and privatization of education in looking beyond these measures to new approaches to educational excellence

Transcendent

Teacher Learner Relationships Hunter O'Hara, 2020-10-12 Now more than ever high quality relationships between teachers and learners are critical to deep meaningful learning and to the learner's long term success *Transcendent Teacher Learner Relationships The Way of the Shamanic Teacher* Second Edition explores the nature of the transcendent teacher learner relationship and precisely how such relationships of warmth safety mutual care mutual respect and mutual trust are developed and maintained Personal narratives from the classroom frontlines as well as the analysis contained herein provide a fresh outlook a roadmap that leads to the most transformative relationships imaginable for teachers and learners What Does Understanding Mathematics Mean for Teachers? Yuichi Handa, 2013-05-13 This book opens up alternative ways of thinking and talking about ways in which a person can know a subject in this case mathematics leading to a reconsideration of what it may mean to be a teacher of that subject In a number of European languages a distinction is made in ways of knowing that in the English language is collapsed into the singular word know In French for example to know in the *savoir* sense is to know things facts names how and why things work and so on whereas to know in the *connaître* sense is to know a person a place or even a thing namely an other in such a way that one is familiar with or in relationship with this other Primarily through phenomenological reflection with a touch of empirical input this book fleshes out an image for what a person's *connaître* knowing of mathematics might mean turning to mathematics teachers and teacher educators to help clarify this image **How should I know?** Kathleen T. Nolan, 2019-02-18 Elementary preservice teachers school experiences of mathematics and science have shaped their images of knowing including what counts as knowledge and what it means to know in mathematics and science In this book preservice teachers voices challenge the hegemony of official everyday narratives relating to these images The book is written as a parody of a physical science textbook on the topic of light presenting a kaleidoscope of elementary preservice teachers narratives of knowing in mathematics and science These narratives are tied together by the metaphorical thread of the properties of light but also held apart by the tensions and contradictions with in such a critical epistemological exploration Through a postmodern lens the only grand narrative that could be imagined for this text is one in which the personal lived experience narratives of the participants mingle and interweave to create a sort of kaleidoscope of narratives With each turn of a kaleidoscope light's reflection engenders new patterns and emergent designs The narratives of this research text highlight patterns of exclusion gendered messages binary oppositions and the particle nature and shadowy texture of knowing in mathematics and science The presentation format of the book emphasizes the reflexive and polyphonic nature of the research design illustrated through layers of spoken text with in performative text with in metaphorical text The metaphor of a kaleidoscope is an empowering possibility for a critical narrative written to both engage and provoke the reader into imagining a critical journey toward possibilities for a different knowing by heart in mathematics and science and for appreciating lived experience narratives with in teacher education
