Kehiaian, 2020-09-23 The CRC Handbook of Thermophysical and Thermochemical Data is an interactive software and handbook package that provides an invaluable source of reliable data embracing a wide range of properties of chemical substances mixtures and reacting systems Use the handbook and software together to quickly and easily generate property values at any desired temperature pressure or mixture composition Molecular Theory of Capillarity J. S.

Rowlinson, B. Widom, 2013-04-26 History of surface phenomena offers critical and detailed examination and assessment of modern theories focusing on statistical mechanics and application of results in mean field approximation to model systems 1989 edition *Halogenated Hydrocarbons* A.L. Horvath, 2020-11-25 This book promotes a basic understanding of the concept of solubility and miscibility between halogenated hydrocarbons and water It points out the regularities existing between solubility and physical properties of solute and solvent The book is valuable to chemists and chemical engineers

Laboratory Unit Operations and Experimental Methods in Chemical Engineering Omar M. Basha, Badie I.

Morsi, 2018-10-10 This book covers a wide variety of topics related to the application of experimental methods in addition to the pedagogy of chemical engineering laboratory unit operations The purpose of this book is to create a platform for the exchange of different experimental techniques approaches and lessons in addition to new ideas and strategies in teaching laboratory unit operations to undergraduate chemical engineering students It is recommended for instructors and students of chemical engineering and natural sciences who are interested in reading about different experimental setups and techniques covering a wide range of scales which can be widely applied to many areas of chemical engineering interest

Thermodynamic Properties of Nonelectrolyte Solutions William Acree, 2012-12-02 Thermodynamic Properties of Nonelectrolyte Solutions reviews several of the more classical theories on the thermodynamics of nonelectrolyte solutions Basic thermodynamic principles are discussed along with predictive methods and molecular thermodynamics This book is comprised of 12 chapters the first of which introduces the reader to mathematical relationships such as concentration variables homogeneous functions Euler's theorem exact differentials and method of least squares The discussion then turns to partial molar quantities ideal and nonideal solutions and empirical expressions for predicting the thermodynamic

properties of multicomponent mixtures from binary data The chapters that follow explore binary and ternary mixtures containing only nonspecific interactions the thermodynamic excess properties of liquid mixtures and ternary alcohol hydrocarbon systems and solubility behavior of nonelectrolytes This book concludes with a chapter describing the use of gas liquid chromatography in determining the activity coefficients of liquid mixtures and mixed virial coefficients of gaseous mixtures This text is intended primarily for professional chemists and researchers and is invaluable to students in chemistry or chemical engineering who have background in physical chemistry and classical thermodynamics

Liquids and Liquid Mixtures J S Rowlinson, F L Swinton, 2013-09-03 Liquids and Liquid Mixtures Third Edition explores the equilibrium properties of liquids and liquid mixtures and relates them to the properties of the constituent molecules using the methods of statistical thermodynamics Topics covered include the critical state fluid mixtures at high pressures and the statistical thermodynamics of fluids and mixtures This book consists of eight chapters and begins with an overview of the liquid state and the thermodynamic properties of liquids and liquid mixtures including vapor pressure and heat capacities The discussion then turns to the thermodynamics of and inequalities at the critical point measurement of thermodynamic functions in the critical region experimental values of the critical exponents and scaling of the free energy The change of thermodynamic functions with composition is the subject of the next two chapters followed by an analysis of fluid mixtures at high pressures The final chapter is devoted to the statistical thermodynamics of fluids and mixtures paying particular attention to the thermodynamic properties in terms of the forces between the molecules the balance of intermolecular potentials between like and unlike molecules and phase behavior This monograph will be of interest to students and researchers in the fields of chemistry and chemical engineering
