Maya Blue Dean E. Arnold, 2024-12-16 One of the great technological achievements of the ancient Maya Maya Blue is one of the world's most unusual ancient pigments In *Maya Blue* Dean E Arnold offers a comprehensive history of its study for almost a century filled with personal anecdotes drawn from his decades of work uncovering the Maya knowledge of its constituents its ancient sources and how it was made including previously unknown methods The book presents a fresh holistic perspective that documents these discoveries and the scientific process that led to them and provides testable hypotheses about how the pigment and the technology used to make it moved throughout Mesoamerica Combining the organic dye indigo and the inorganic clay mineral palygorskite in a highly stable chemical hybrid that unlike indigo resists attacks by acids alkalines and organic solvents and endures without fading Maya Blue has a rich blue color that has survived for centuries in one of the world's harshest climates First used at the site of Calakmul in the tropical forest of southern Mexico during the Late Preclassic period the Maya's abiding hue diffused across Mesoamerica over a period of 1 700 years It appears on Maya pottery sculpture murals and codices and carries multiple meanings standing as a symbol for cultural cornerstones such as sacrifice and the rain god Chaak It was discovered in 1931 at Chichén Itz and its composition was a mystery for more than three decades then questions about its source how and why it achieved such stability and how and why the Maya made the pigment persisted even longer In *Maya Blue* Arnold summarizes ethnographic archaeological chemical and material science research over the last century from an anthropological perspective This thorough engaging and accessible book chronicles the history of this pigment as no work has done before
