B Physics At Hadron Machines 9th International Conference:

B Physics at Hadron Machines Manfred Paulini, Samim Erhan, 2004-09-28 This conference series reviews progress in understanding the physics of the 5th quark beauty quark or bottom quark and the properties of particles containing a b quark These quarks are produced at particle accelerators such as electron positron accelerators or hadron colliders with the latter being the focus of the conference One of the main issues in understanding the physics of the 5th quark is CP violation a mechanism in particle physics that breaks the symmetry of nature between particles and antiparticles ultimately connected to the particle antiparticle asymmetry of the universe Topics include recent results CP violation B production and spectroscopy detectors hardware and computing Vub and factorization B lifetimes and mixing rare decays B trigger at future experiments B physics at future hadron machines the future of flavor

Large Hadron Collider Phenomenology M. Kramer, F.J.P. Soler, 2004-09-30 With the Large Hadron Collider LHC under construction and due to come online in 2007 it is appropriate to engage in a focused review on LHC phenomenology At a time when most of the experimental effort is centered on detector construction and software development it is vitally important to direct the experimental community and in particular new researchers on the physics phenomena expected from the LHC Large Hadron Collider Phenomenology covers the capabilities of LHC from searches for the Higgs boson and physics beyond the standard model to detailed studies of quantum chromodynamics the B physics sectors and the properties of hadronic matter at high energy density as realized in heavy ion collisions Written by experienced researchers and experimentalists this reference examines the basic properties and potentials of the machine detectors and software required for physics analyses The book starts with a basic introduction to the standard model and its applications to the phenomena observed at high energy collisions Later chapters describe the key technological challenges facing the construction of the LHC machine the operating detectors of the LHC and the vast computing grid needed to analyze the data In the final sections the contributors discuss the quark gluon plasma QGP explore questions and predictions for the LHC program and examine the physics opportunities of the LHC using information from the forward region By surveying the difficult challenges of the LHC development while also assessing the novel processes that the LHC will perform Large Hadron Collider Phenomenology aids less seasoned physicists as well as existing researchers in discovering the numerous possibilities of the LHC

Proceedings of the Third International Conference on B Physics and CP Violation Hai-Yang Cheng, Wei-Shu Hou, 2000 Proceedings of the Third International Conference on B Physics and CP Violation held in Taipei Taiwan December 3 7 1999 The main focus of the conference was to discuss the state of the art and future prospects of the field at a high technical level The fifth conference is to be held in May 2002 in Philadelphia The Fourth took place in Central Japan in February 2001
