the early 1980s there was virtually no serious communication among the various groups that contribute to mathematics education mathematicians mathematics educators classroom teachers and cognitive scientists Members of these groups came from different traditions had different perspectives and rarely gathered in the same place to discuss issues of common interest Part of the problem was that there was no common ground for the discussions given the disparate traditions and perspectives As one way of addressing this problem the Sloan Foundation funded two conferences in the mid 1980s bringing together members of the different communities in a ground clearing effort designed to establish a base for communication In those conferences interdisciplinary teams reviewed major topic areas and put together distillations of what was known about them A more recent conference upon which this volume is based offered a forum in which various people involved in education reform would present their work and members of the broad communities gathered would comment on it The focus was primarily on college mathematics informed by developments in K 12 mathematics The main issues of the conference were mathematical thinking and problem solving

Mathematics Tomorrow L.A. Steen, 2012-12-06 Mathematics today is approaching a state of crisis As the demands of science and society for mathematical literacy increase the percentage of American college students intending to major in mathematics plummets and achievement scores of entering college students continue their unremitting decline As research in core mathematics reaches unprecedented heights of power and sophistication the growth of diverse applied specialties threatens to fragment mathematics into distinct and frequently hostile mathematical sciences These crises in mathematics presage difficulties for science and engineering and alarms are beginning to sound in the scientific and even in the political communities Citing a trend towards virtual scientific and technological illiteracy and a shrinking of our national commitment to excellence in science mathematics and technology a recent study conducted for the President by the U S National Science Foundation and Department of Education warns of serious impending shortcomings in public understanding of science Today people in a wide range of non scientific professions must have a greater understanding of technology than at any time in our history Yet our educational system does not now provide such understanding The study goes on to conclude that present trends pose great risk of manpower shortages in the mathematical and engineering sciences The pool from which our future scientific and engineering personnel can be drawn is in danger of becoming smaller even as the need for such personnel is increasing It is time to take a serious look at mathematics tomorrow
