ADVANCE DIRECTIVES)**Bathing**

Teach the parents proper newborn bathing techniques by a demonstration.
Have the parents return the demonstration.

Underlying Principles

The nurse should assess family's readiness for discharge and care of newborn by:
Assess home environment ready for newborn.
History, experience & knowledge
Parent-Newborn bond.
Parents adjustment to the role.
Social support.
Emotional readiness.
Parents ability to teach back education of newborn care.

Nursing Interventions

WHO? WHEN? WHY? HOW?

Skin care

The eyes are cleaned using a clean portion of the wash cloth. The newborn should be washed, rinsed, and dried with no soap left on the skin.

Infant safety

Do not leave the newborn unattended during the bath. Hot water heater should be set at 49° c (120.2° f) or less. The room should be warm, and the bath water should be at 36.6° to 37.2° c (98° to 99° f). Bath water should be tested on the inner wrist prior to use.

Order of giving the bath

Move from the cleanest to the dirtiest areas of the newborn's body, which includes starting with the eyes, face, and head; proceeding to the chest, arms, and legs; and washing the groin area last. The eyes are cleaned by moving from the inner to the outer canthus.

Preventing complications

Bathing by immersion is not done until the umbilical cord falls off and the circumcision is healed. Do not bathe the newborn immediately after feeding to prevent spitting up and vomiting. After cleansing the uncircumcised newborn male, the foreskin should not be forced back. In female newborns, wash the vulva by wiping from front to back.

fundamental data mining courses Recent years have seen the emergence of the job description of data scientists who try to glean knowledge from vast amounts of data In typical applications the data types are so heterogeneous and diverse that the fundamental methods discussed for a multidimensional data type may not be effective Therefore more emphasis needs to be placed on the different data types and the applications which arise in the context of these different data types A comprehensive data mining book must explore the different aspects of data mining starting from the fundamentals and then explore the complex data types and their relationships with the fundamental techniques While fundamental techniques form an excellent basis for the further study of data mining they do not provide a complete picture of the true complexity of data analysis This book studies these advanced topics without compromising the presentation of fundamental methods Therefore this book may be used for both introductory and advanced data mining courses Until now no single book has addressed all these topics in a comprehensive and integrated way
