Arduino es una familia de microcontroladores y un entorno de creación de software que facilita la creación de programas llamados bocetos que pueden interactuar con el mundo físico. En el caso de este libro la idea es usar Arduino con diferentes versiones del estándar Bluetooth. El libro está dividido en diez proyectos y al final del libro en el Anexo I aparece el código fuente de la mayoría de estos proyectos.

Technology s contribution to economic growth and competitiveness has been the subject of vigorous debate in recent years This book demonstrates the importance of a historical perspective in understanding the role of technological innovation in the economy The authors examine key episodes and institutions in the development of the U S research system and in the development of the research systems of other industrial economies They argue that the large potential contributions of economics to the understanding of technology and economic growth have been constrained by the narrow theoretical framework employed within neoclassical economies A richer framework they believe will support a more fruitful dialogue among economists policymakers and managers on the organization of public and private institutions for innovation David Mowery is Associate Professor of Business and Public Policy at the School of Business Administration University of California
