Electronic Business Machines Calculation Daniel J. Schneck, 1991 *Area Wage Survey*, 1982 *From Gutenberg to the Internet* Jeremy M. Norman, 2005 *From Gutenberg to the Internet* presents 63 original readings from the history of computing networking and telecommunications arranged thematically by chapters Most of the readings record basic discoveries from the 1830s through the 1960s that laid the foundation of the world of digital information in which we live These readings some of which are illustrated trace historic steps from the early nineteenth century development of telegraph systems the first data networks through the development of the earliest general purpose programmable computers and the earliest software to the foundation in 1969 of ARPANET the first national computer network that eventually became the Internet The readings will allow you to review early developments and ideas in the history of information technology that eventually led to the convergence of computing data networking and telecommunications in the Internet The editor has written a lengthy illustrated historical introduction concerning the impact of the Internet on book culture It compares and contrasts the transition from manuscript to print initiated by Gutenberg's invention of printing by moveable type in the 15th century with the transition that began in the mid 19th century from a print centric world to the present world in which printing co exists with various electronic media that converged to form the Internet He also provided a comprehensive and wide ranging annotated timeline covering selected developments in the history of information technology from the year 100 up to 2004 and supplied introductory notes to each reading Some introductory notes contain supplementary illustrations

respective eras In turn it emphasizes the history of comparisons between these artifacts Topics and Features motivates exposition through a firm historiographical argument of important developments explores the history of the slide rule and its use in the context of electrification examines the roles of analyzers graphs and a whole range of computing artifacts hitherto placed under the allegedly inferior class of analog computers shows how the analog and the digital are really inseparable with perceptions thereof depending on either a full or a restricted view of the computing process investigates socially situated comparisons of computing history including the effects of a political economy of computing one that takes into account cost and ownership of computing artifacts assesses concealment of analog machine labor through encasement black boxing Historians of computing as well as those of technology and science especially energy will find this well argued and presented history of calculation and computation in the mechanical and electrical eras an indispensable resource The work is a natural textbook companion for history of computing courses and will also appeal to the broader readership of curious computer scientists and engineers as well as those who generally just have a yearn to learn the contextual background to the current digital age In this fascinating original work Tympas indispensably intertwines the histories of analog and digital computing showing them to be inseparable from the evolution of social and economic conditions Prof David Mindell MIT
