Elman, Nikita Karpenko, Alexander Merkurjev, 2008-07-15 This book is a comprehensive study of the algebraic theory of

quadratic forms from classical theory to recent developments including results and proofs that have never been published The book is written from the viewpoint of algebraic geometry and includes the theory of quadratic forms over fields of characteristic two with proofs that are characteristic independent whenever possible For some results both classical and geometric proofs are given Part I includes classical algebraic theory of quadratic and bilinear forms and answers many questions that have been raised in the early stages of the development of the theory Assuming only a basic course in algebraic geometry Part II presents the necessary additional topics from algebraic geometry including the theory of Chow groups Chow motives and Steenrod operations These topics are used in Part III to develop a modern geometric theory of quadratic forms

 Shafarevich, 2013-11-27 The first edition of this book came out just as the apparatus of algebraic geometry was reaching a

stage that permitted a lucid and concise account of the foundations of the subject The author was no longer forced into the painful choice between sacrificing rigour of exposition or overloading the clear geometrical picture with cumbersome algebraic apparatus The 15 years that have elapsed since the first edition have seen the appearance of many beautiful books treating various branches of algebraic geometry However as far as I know no other author has been attracted to the aim which this book set itself to give an overall view of the many varied aspects of algebraic geometry without going too far afield into the different theories There is thus scope for a second edition In preparing this I have included some additional material rather varied in nature and have made some small cuts but the general character of the book remains unchanged **United**
