Introduction to Ferroic Materials Vinod Wadhawan, 2000-12-21 Ferroic materials are important not only because of the improved understanding of condensed matter but also because of their present and potential device applications This book presents a unified description of ferroic materials at an introductory level with the unifying factor being the occurrence of nondisruptive phase transitions in crystals that alter point group symmetry The book also aims to further systematize the subject of ferroic materials employing some formal carefully worded definitions and classification schemes The basic physical principles leading to the wide ranging applications of ferroic materials are also explained while placing extra emphasis on the utilitarian role of symmetry in materials science

Non-Reciprocal Materials and Systems Prabhakar Bandaru, 2024-01-22 Non Reciprocal Materials and Systems An Engineering Approach to the Control of Light Sound and Heat discusses the related concept of bound states which help confine sound and electromagnetic waves and can also lead to the control of thermal energy The requirements for the formation of such bound states their relationship to physical and topological characteristics of materials and the possible application to new devices is considered The book takes a unique approach to energy transfer in and between materials systems considering dimensional effects supersonic transonic and subsonic wave motion as well as the coupling of waves This book is suitable for researchers in materials science condensed matter physics electrical mechanical and structural engineering and technologists aiming for better control of non electronic physical phenomena Provides information on how to use specific features in new and artificial materials for the control of sound light and heat Explores dimensional considerations such as surface material phenomena that can be decoupled from bulk materials or the inside of a material Discusses new device concepts and related technologies such as energy sources isolators and diodes involving energy confinement

Conjunctive Explanations in Science and Religion Diarmid A. Finnegan, David H. Glass, Mikael Leidenhag, David N. Livingstone, 2023-02-28 This book investigates the nature and relevance of conjunctive explanations in the context of science and religion It explores questions concerning how scientific and religious explanations for features of the world or phenomena within it relate to each other and whether they might work together in mutually enriching ways The chapters address topics including the relationship between Darwinian and teleological explanations non reductive explanations of mind and consciousness and explanations of Christian faith and religious experience while others explore theological and philosophical issues concerning the nature and feasibility of conjunctive explanations Overall the contributions help to provide conceptual clarity on how scientific and religious

explanations might or might not work together conjunctively as well as exploring how these ideas relate to specific topics in science and religion more generally

Trohidou, 2014-09-19 Magnetic nanoparticles with diameters in the range of a few nanometers are today at the cutting edge of modern technology and innovation because of their use in numerous applications ranging from engineering to biomedicine A great deal of scientific interest has been focused on the functionalization of magnetic nanoparticle assemblies The understanding of interparticle interactions is necessary to clarify the physics of these assemblies and their use in the development of high performance magnetic materials This book reviews prominent research studies on the static and dynamic magnetic properties of nanoparticle assemblies gathering together experimental and computational techniques in an effort to reveal their optimized magnetic properties for biomedical use and as ultra high magnetic recording media

From Electrons to Elephants and Elections Shyam Wuppuluri, Ian Stewart, 2022-04-08 This highly interdisciplinary book covering more than six fields from philosophy and sciences all the way up to the humanities and with contributions from eminent authors addresses the interplay between content and context reductionism and holism and their meeting point the notion of emergence Much of today's science is reductionist bottom up in other words behaviour on one level is explained by reducing it to components on a lower level Chemistry is reduced to atoms ecosystems are explained in terms of DNA and proteins etc This approach fails quickly since we can't cannot extrapolate to the properties of atoms solely from Schrödinger's equation nor figure out protein folding from an amino acid sequence or obtain the phenotype of an organism from its genotype An alternative approach to this is holism top down Consider an ecosystem or an organism as a whole seek patterns on the same scale Model a galaxy not as 400 billion point masses stars but as an object in its own right with its own properties spiral elliptic Or a hurricane as a structured form of moist air and water vapour Reductionism is largely about content whereas holistic models are more attuned to context Reductionism content and holism context are not opposing philosophies in fact they work best in tandem Join us on a journey to understand the multifaceted dialectic concerning this duo and how they shape the foundations of sciences and humanities our thoughts and the very nature of reality itself

Microwaves, Millimeter Wave and Terahertz Liquid Crystals Anyong Qing, Yizhe Zhao, Zhiyong Zhang, 2024-03-05 This book is the first ever monograph on nematic liquid crystals for microwaves millimeter waves and terahertz waves It presents the first hand independent studies on nematic liquid crystals for microwaves millimeter waves and terahertz waves This book opens with an introduction to generic liquid crystals and a retrospective review about nematic liquid crystals in microwaves millimeter waves and terahertz waves Attention is then focused on the latest in house progress on microwave millimeter wave and terahertz nematic liquid crystals Synthesis and characterization of novel nematic liquid crystals are first presented followed by indigenous technologies to manufacture

Fundamental World of Quantum Chemistry Erkki Brändas, Eugene S. Kryachko, 2003 Per Olov Löwdin's stature has been a symbol of the world of quantum theory during the past five decades through his basic contributions to the development of the conceptual framework of Quantum Chemistry and introduction of the fundamental concepts through a staggering number of regular summer schools winter institutes innumerable lectures at Uppsala Gainesville and elsewhere and Sanibel Symposia by founding the International Journal of Quantum Chemistry and Advances in Quantum Chemistry and through his vision of the possible and his optimism for the future which has inspired generations of physicists chemists mathematicians and biologists to devote their lives to molecular electronic theory and dynamics solid state and quantum biology Fundamental World of Quantum Chemistry Volumes I II and III form a collection of papers dedicated to the memory of Per Olov Löwdin These volumes are of interest to a broad audience of quantum theoretical physical biological and computational chemists atomic molecular and condensed matter physicists biophysicists mathematicians working in many body theory and historians and philosophers of natural science [More And Different: Notes From A Thoughtful Curmudgeon](#) Philip W Anderson, 2011-09-01 Named a Top Five Book of 2012 by Physics Today USA Anderson has put together an entertaining and instructive collection of highly readable reviews columns talks and unpublished essays on science and the scientists he has known He is rarely inappropriately provocative and he is a pleasure to read Physics Today Philip Anderson was educated at University High School in Urbana Illinois at Harvard BS 1943 PhD 1949 and further educated at Bell Laboratories where his career 1949 1984 coincided with the greatest period of that remarkable institution Starting in 1967 he shared his time with Cambridge University until 1975 and then with Princeton where he continued full time as Joseph Henry Professor until 1997 As an emeritus he remains active in research and at press time he was involved in several scientific controversies about high profile subjects in which his point of view though unpopular at the moment is likely to prevail eventually His colleagues have made him one of the two physicists most often cited in the scientific literature for several decades His work is characterized by mathematical simplicity combined with conceptual depth and by profound respect for experimental findings He has explored areas outside his main discipline the quantum theory of condensed matter for which he won the 1977 Nobel Prize on several occasions his paper on what is now called the Anderson Higgs mechanism was a main source for Peter Higgs elucidation of the boson a crucial insight led to work on the dynamics of neutron stars

pulsars and his concept of the spin glass led far afield to developments in practical computer algorithms and neural nets and eventually to his involvement in the early years of the Santa Fe Institute and his co leadership with Kenneth Arrow of two influential workshops on economics at that institution His writing career started with a much quoted article in Science titled More is Different in 1971 he was an occasional columnist for Physics Today in the 1980s and 1990s He was more recently a reviewer of science and science related books for the Times London Higher Education Supplement as well as an occasional contributor to Science Nature and other journals Marginalism and Discontinuity Martin H. Krieger, 1989-11-21

Marginalism and Discontinuity is an account of the culture of models employed in the natural and social sciences showing how such models are instruments for getting hold of the world tools for the crafts of knowing and deciding Like other tools these models are interpretable cultural objects objects that embody traditional themes of smoothness and discontinuity exchange and incommensurability parts and wholes Martin Krieger interprets the calculus and neoclassical economics for example as tools for adding up a smoothed world a world of marginal changes identified by those tools In contrast other models suggest that economies might be sticky and ratchety or perverted and fetishistic There are as well models that posit discontinuity or discreteness In every city for example some location has been marked as distinctive and optimal around this created differentiation a city center and a city periphery eventually develop Sometimes more than one model is applicable the possibility of doom may be seen both as the consequence of a series of mundane events and as a transcendent moment We might model big decisions or entrepreneurial endeavors as sums of several marginal decisions or as sudden marked transitions changes of state like freezing or religious conversion Once we take models and theory as tools we find that analogy is destiny Our experiences make sense because of the analogies or tools used to interpret them and our intellectual disciplines are justified and made meaningful through the employment of characteristic toolkits a physicist's toolkit for example is equipped with a certain set of mathematical and rhetorical models Marginalism and Discontinuity offers a provocative and wide ranging consideration of the technologies by which we attempt to apprehend the world It will appeal to social and natural scientists mathematicians and philosophers and thoughtful educators policymakers and planners
