Statistical Time Series Wayne A. Fuller, 2009-09-25 The subject of time series is of considerable interest especially among researchers in econometrics engineering and the natural sciences As part of the prestigious Wiley Series in Probability and Statistics this book provides a lucid introduction to the field and in this new Second Edition covers the important advances of recent years including nonstationary models nonlinear estimation multivariate models state space representations and empirical model identification New sections have also been added on the Wold decomposition partial autocorrelation long memory processes and the Kalman filter Major topics include Moving average and autoregressive processes Introduction to Fourier analysis Spectral theory and filtering Large sample theory Estimation of the mean and autocorrelations Estimation of the spectrum Parameter estimation Regression trend and seasonality Unit root and explosive time series To accommodate a wide variety of readers review material especially on elementary results in Fourier analysis large sample statistics and difference equations has been included *Geometrical Foundations of Asymptotic Inference* Robert E. Kass, Paul W.

Vos, 2011-09-09 Differential geometry provides an aesthetically appealing and often revealing view of statistical inference Beginning with an elementary treatment of one parameter statistical models and ending with an overview of recent developments this is the first book to provide an introduction to the subject that is largely accessible to readers not already familiar with differential geometry It also gives a streamlined entry into the field to readers with richer mathematical backgrounds Much space is devoted to curved exponential families which are of interest not only because they may be studied geometrically but also because they are analytically convenient so that results may be derived rigorously In addition several appendices provide useful mathematical material on basic concepts in differential geometry Topics covered include the following Basic properties of curved exponential families Elements of second order asymptotic theory The Fisher Efron-Amari theory of information loss and recovery Jeffreys Rao information metric Riemannian geometry Curvature measures of nonlinearity Geometrically motivated diagnostics for exponential family regression Geometrical theory of divergence functions A classification of and introduction to additional work in the field **A Weak Convergence Approach to the**

Theory of Large Deviations Paul Dupuis, Richard S. Ellis, 1997-02-27 Applies the well developed tools of the theory of weak convergence of probability measures to large deviation analysis a consistent new approach The theory of large deviations one of the most dynamic topics in probability today studies rare events in stochastic systems The nonlinear nature of the theory contributes both to its richness and difficulty This innovative text demonstrates how to employ the well established linear techniques of weak convergence theory to prove large deviation results Beginning with a step by step development of the approach the book skillfully guides readers through models of increasing complexity covering a wide variety of random variable level and process level problems Representation formulas for large deviation type expectations are a key tool and are developed systematically for discrete time problems Accessible to anyone who has a knowledge of measure theory and measure theoretic probability A Weak Convergence Approach to the Theory of Large Deviations is important reading for both students and researchers

Bayesian Analysis in Statistics and Econometrics Donald A. Berry, Kathryn M. Chaloner, John K. Geweke, 1996 This book is a definitive work that captures the current state of knowledge of Bayesian Analysis in Statistics and Econometrics and attempts to move it forward It covers such topics as foundations forecasting inferential matters regression computation and applications

Kadane, David A. Schum, 2011-09-26 A Probabilistic Analysis of the Sacco and Vanzetti Evidence is a Bayesian analysis of the trial and post trial evidence in the Sacco and Vanzetti case based on subjectively determined probabilities and assumed relationships among evidential events It applies the ideas of charting evidence and probabilistic assessment to this case which is perhaps the ranking cause celebre in all of American legal history Modern computation methods applied to inference networks are used to show how the inferential force of evidence in a complicated case can be graded The authors employ probabilistic assessment to obtain opinions about how influential each group of evidential items is in reaching a conclusion about the defendants innocence or guilt A Probabilistic Analysis of the Sacco and Vanzetti Evidence holds particular interest for statisticians and probabilists in academia and legal consulting as well as for the legal community historians and behavioral scientists It combines structural and probabilistic ideas in the analysis of masses of evidence from every recognized logical species of evidence Twenty eight charts show the chains of reasoning in defense of the relevance of evidentiary matters and a listing of trial witnesses who provided the evidence References include nearly 300 items drawn from the fields of probability theory history law artificial intelligence psychology literature and other areas Multivariate Density Estimation David W. Scott, 2009-09-25

Written to convey an intuitive feel for both theory and practice its main objective is to illustrate what a powerful tool density estimation can be when used not only with univariate and bivariate data but also in the higher dimensions of trivariate and quadrivariate information Major concepts are presented in the context of a histogram in order to simplify the treatment of advanced estimators Features 12 four color plates numerous graphic illustrations as well as a multitude of problems and solutions
