This volume is concerned with the interaction of visual and learning processes and how dysfunction in each relates to learning disability. For the purposes of this book, "learning disability" is referred to as a retardation, disorder or delayed development in one or more of the processes of speech, language, reading, writing or arithmetic in a child of average, near average or above average intellectual ability which may be caused by deficits other than primary mental retardation or poor instruction. This book examines the most frequently cited characteristics of children with learning disabilities in relation to basic visual processes. Among these are hyperactivity; perceptual motor impairment; emotional lability; general orientation defects; disorders of attention; impulsivity; disorders of memory and thinking; difficulty with reading, writing and spelling; disorders of speech and hearing; and equivocal EEG irregularities and neurological signs.

Vision is viewed in this book as a broad and dynamic process including function related to the peripheral end-organ, the neural extension, the integration into the total sensory-motor systems of the body and the role of the

subserving processes. This view of vision will provide a better understanding of the physical, physiological and psychological relationships between vision and the total behavior of the learning disabled child.

The book also discusses the way in which many of the problems encountered by these children are based in central nervous system deficits. It is the contention of the editor and contributors that therapeutic intervention should be directed more toward a holistic approach than toward a symptomatic one.

This volume stresses that learning disability is a multifaceted, interdisciplinary problem which cannot be approached from either a laboratory or classroom perspective exclusively. Instead, the chapters concerning the many assorted handicaps of the learning disability entity will indicate that basic integrative and associational processes are involved and that the ultimate answers will have to come from research.

To integrate the effort toward a better understanding of the total problem, this book describes basic processes and outlines specific disorders, diagnoses and treatment possibilities.

Basic Visual Processes And Learning Disability:

Basic Visual Processes and Learning Disability Gerald Leisman, 1975 Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyn Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines. The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities. Although great progress has been made, there are certain aspects that have been relatively neglected in the current understanding. Specifically, the role of visual factors has received less attention than that of other component processes. This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved. Relevant research is broadly scattered both geographically and in terms of disciplines, and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities. The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities. Because reading processes are of central interest to cognitive scientists, neuropsychologists, psycholinguists, clinicians, and educators, this book should draw a very broad readership.

Basic Visual Processes and Learning Disabilities Gerald Leisman, 1976 **Learning About Learning Disabilities** Po-Zen Wong, Bernice Wong, 2014-05-19 This is the first textbook to give equal attention to the intellectual, conceptual, and practical aspects of learning disabilities. Topical coverage is both comprehensive and thorough, and the information presented is up to date. Provides a balanced focus on both the conceptual and practical aspects of learning disabilities. LD. The research covered is far more comprehensive and of greater depth than any other LD textbook. The work is distinctive in its treatment of such important areas as consultation skills and service delivery.

Resources in Education, 1998 **Handbook of Cognitive, Social, and Neuropsychological Aspects of Learning Disabilities** S. J. Ceci, Stephen J. Ceci, 2014-05-22 First Published in 1986 This is the companion volume to the *Handbook of Cognitive Social and Neuropsychological Aspects of Learning Disabilities Vol 1*. As such, it is a continuation of the theme and approach taken in the first volume. There are four thematic sections, comprised of three to four chapters each, dealing with cognitive, micro level and macro level social and neurological characteristics of learning disabled individuals.

Learning Disabilities Nirbhay N. Singh, Ivan L. Beale, 2012-12-06 It is important to reaffirm the reality of the learning disabilities LD phenomenon as a condition that imposes genuine constraints on a student's ability to function and not as some chimerical entity defined by an ever-changing political situation. Perceptual, memory, attention, linguistic, social, cognitive, and neuropsychological factors are an integral part of LD. By mapping out in great detail and with much new data, the acquired knowledge on learning disabilities, both empirical and theoretical, this book unravels many mysteries. This book is a landmark in learning disabilities studies and it lays down solid foundations for future research and practical intervention in the field.

Focus on Dyslexia

Research Henry D. Tobias, 2004 Dyslexia is a brain based type of learning disability that specifically impairs a person's ability to read. Although the disorder varies from person to person, common characteristics among people with dyslexia are difficulty with phonological processing, the manipulation of sounds, and/or rapid visual verbal responding. The syndrome of dyslexia does not imply low intelligence or poor educational potential and is independent of race and social background. Although dyslexia seems to be more prevalent among males than females, the exact ratio is unknown; the most commonly quoted figures are between 3:1 and 5:1. The evidence suggests that in at least two thirds of cases, dyslexia has a genetic cause, but in some cases, birth difficulties may play a role. Dyslexia may overlap with related conditions such as dyspraxia, attention deficit disorder, with or without hyperactivity, and dysphasia. In childhood, its effects can be misattributed to emotional or behavioural disorders. By adulthood, many dyslexics will have developed sophisticated compensating strategies that may mask their difficulties. This new book presents state of the art research in this dynamic field.

EVALUATION AND EDUCATIONAL PROGRAMMING OF STUDENTS WITH DEAFBLINDNESS AND SEVERE DISABILITIES Carroll J. Jones, 2001-01-01
The special education area of deafblind severe disabilities is a highly specialized area involving a close working relationship among medical and educational professionals. In this book, author Jones presents a very complete package of information for the educator of children with severe disabilities. The book includes detailed diagnostic information so that the teacher will understand the physical, mental, social, and educational status of the student. The materials allow the teacher to plan for skill development based on the specific deficits of the child in relation to the skills needed. The main features of this new Second Edition remain to provide a teacher training text and resource volume for teachers and other professionals serving not only students with deafblindness and severe disabilities but also children of any disability functioning within the sensorimotor stage of development. The new edition also provides under one cover: theoretical background information, medical information, diagnostic information, and specific instructional information for classroom teachers and related service professionals to use in determining functional abilities for program planning and writing IEPs; collecting data to monitor IEPs; and ideas for hands-on materials that teachers can create and use for instruction in their classrooms. Each chapter begins with a brief outline, discusses background, medical information, and theory; discusses evaluation, diagnosis, programming, and IEP monitoring; and ends with a summary. Also included are the new research and developments in the field and an expanded view of motor skills. Tables have been reformatted at the back of each chapter. A major addition to this text is the focus on Snoezelen, which includes developing a Snoezelen resource room, designing the room with placement of the special materials, and specific ways of using the Snoezelen room and the sensory stimulation materials for relaxation, leisure, and enjoyment.
