1988 Powertrain Diagnostic Test Procedure:

Diagnosis of the Powertrain Systems for Autonomous Electric Vehicles Tunan Shen, 2022-03-02 Tunan Shen aims to increase the availability of powertrain systems for autonomous electric vehicles by improving the diagnostic capability for critical faults. Following the fault analysis of powertrain systems in battery electric vehicles, the focus is on the electrical and mechanical faults of the electric machine. A multi-level diagnostic approach is proposed, which consists of multiple diagnostic models such as a physical model, a data-based anomaly detection model, and a neural network model. To improve the overall diagnostic capability, a decision-making function is designed to derive a comprehensive decision from the predictions of various operating points and different models. **Writing and Designing Manuals and Warnings 4e** Patricia A.
