Hinchee,R.N. Miller,R.E. Hoeppel,1994-03-08 With oil spills occurring worldwide much media and practical attention has been given in recent years to the rapidly maturing field of hydrocarbon bioremediation particularly with application to marine spills Hydrocarbon contamination of soil and groundwater although less visible is even more widespread and has provided the background for the numerous studies presented in this book in addition to those devoted to shoreline spills Chapters address a wide variety of theory and practice and cover important subjects such as biofiltration natural attenuation surfactants and the use of in situ bioventing compared to soil venting This unique book represents the collective global experience of practitioners and researchers in North America Europe Africa and Asia It describes experiences in tying laboratory studies to field applications Nowhere else can anyone involved in hydrocarbon bioremediation find more up to date relevant information on field experience using the various techniques and combinations of techniques in remediating hydrocarbons by biological means **Bioremediation of Pollutants in Soil and Water** Brian S. The book considers how chemical dispersants work for oil spills the properties and chemistry of oils including weathering state the variables that affect dispersant performance and the relationships between laboratory methods and field situations. The book also considers the strengths and limitations of specific laboratory tests including brief discussions of the applicability of results for estimating dispersant performance in field trials or conditions encountered during real spill events. Laboratory tests are separated into four groups tank tests shake flask tests interfacial surface tension tests and flume tests. Rapid screen field tests are considered as a separate group. Recommendations for improvements in future laboratory testing are offered as well. *Oil Spill Dispersants* will be useful for regulators evaluating dispersant agents field personnel involved with using dispersants laboratory scientists studying performance and behavior of oil and dispersants and managers responsible for designing studies related to the treatment of oil slicks with dispersants *Oil Spills First Principles* B. Ornitz†, M. Champ, 2002-06-18 Marine oil spills are no longer considered unavoidable accidents resulting from adverse environmental conditions or functions of catastrophic events. More than 80% of all spills are the result of human error. The focus of the current legal regulatory and convention framework affecting the transportation of oil by ship reflects a recent change in public attitude in which there is an insistence upon protection of the world's marine environments particularly coastal ecosystems. The outcome of such global attention is the creation of significant legal and political motivators for a cultural shift by the oil shipping industry from an evasion culture to a safety culture. The new safety culture connotes continuous improvement in ship operations and a willingness to adopt the evolving concepts of communication at all levels better trained and qualified personnel on board ship emphasis of safety from top down and proactive institution of safety management systems. Mere compliance with international and national laws is no longer sufficient for future sustainable shipping. These changes and advancements in understanding the science and engineering of oil spills are the focus of this book on *Oil Spills First Principles*. They are Prevention based upon adoption of the safety culture and Best Response utilizing scientific technical and environmental data and information. Over the past 30

years billions of US dollars have been spent in R D planning response and clean up of oil spills All of these efforts have focused on achieving Best Response The concept of time periods of Technology Windows of Opportunity for a given response and clean up technology has developed from the leadership and wisdom of researchers and responders from many nations using modeling of the weathering of spilled oil and technology effectiveness The Windows of Opportunity strategy provides a scientific basis for policy and decision making in oil spill planning response and training A global paradigm shift is needed to more effectively utilize and expedite the application of lessons learned in both prevention and clean up Recognition of economic political and legal benefits accruing from environmental protection is good for business and critical for sustainable shipping **Antarctic Journal of the United States** ,1992
