Algorithmic Aspects Of Flows In Networks:

Algorithmic Aspects of Flows in Networks Günther Ruhe,2012-12-06 Flows in networks are of growing interest from the point of view of both theory and applications The development of very efficient algorithms for most classes of network problems combined with the powerful computers now available have led to an increasing number of applications The large spectrum of real world applications includes production distribution urban traffic manpower planning computer networks facility location routing and scheduling Starting from fundamental models as maximum flows or minimum cost flows more advanced models have been investigated Related to theory network flows have been proven to be an excellent indicator of things to come in other areas especially in mathematical programming
