

Alienation in sociological theory

Classical theories

Although she did not develop her ideas in universalistic terms, Martineau (1837) theorized Smith's insights, pointing out that even though work is essential to a satisfactory life, workers are often exploited. She saw that through domestic work women are deprived of the human yearning for (high) culture and for autonomy.

Marx (1977 [1844]) moved the Hegelian dialectic from the realm of ideas to its material foundations in political economy, formalizing and contextualizing observations of the alienating effects of the division of labor in industrial society. With land scarce, workers migrated to cities where they sold their labor power to factory owners who determined what to produce and how and 'owned the products of the workers made for their 'exchange value on the market'. As with all commodities, the value of labor was in constant flux. Turned into extensions of machines, workers were estranged from their works, their products and from their very selves. They were cut off from community support and unable to effectively control their lives. The chasm between those who were paid wages for production and those who accumulated the profits from that production, the surplus value created by labor, those who owned, managed and marketed products, was unbridgeable. Insofar as the structural position of workers was most vulnerable to the uncertainties of capitalism, as well as to understanding the world through the ideologies created by the upper classes, they were unable to apprehend their own interests. With a dialectical concept of alienation as the process of oppression and the name of a distressed psychological state, Marx applied 'alienation' to the sociopolitical milieu. Even though after the 1844 Manuscripts, he did not make use of the term to pinpoint specific weaknesses of production and distribution (Williamson and Cullingford, 1997), the analysis of alienation underlay Marx's *Das Kapital*, his extensive critique of capitalist political economy. Lukács (1920) however was able to reconstruct Marx's ideas of alienation as 'reification' a concept closely tied to 'commodity fetishism' (social relations appearing as 'things' for Marx. The clearest exposition of Marx's writings on alienation remains Fromm's treatise (1961).

Weber and Durkheim also noted the adverse consequences of working conditions in modern society. For Weber (1958 [1946]), rationality, the dominant value of modernity, shaped modern production and administration in industry as well as in politics which is now dominated by rational, bureaucratic organizations. Rational principles of calculability were applied to every domain of modern life including the
