Kenakin,J. A. Angus,2012-12-06 This the 148th volume of the *Handbook of Experimental Pharmacology* series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book *The Mode of Action of Drugs* An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as *Curves relating exposure to drugs with biological effects* and *Implications of monomolecular theory* show Clark s keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required [National Library of Medicine Current Catalog](#) National Library of Medicine (U.S.),1992 [A-Adrenoceptors](#) Ruffolo, Robert,1991-01-01 [Foye's Principles of Medicinal Chemistry](#) Marc W. Fountoulakis,2022-12-08 This book constitutes the end result of 20 years long effort that goes beyond a Psychiatrist s standard clinical training and education even that of a Psychiatrist that follows an academic career Trying to explain how the human mind works is hard and the heterogeneity of the audience make the attempt even more difficult There is a conceptual difference between the words brain and mind and this makes the effort even more difficult since the present book tries to preserve the strict scientific approach concerning all the topics discussed The work elaborates and tries to answer questions frequently phrased by audiences in teaching classes and in conferences and does not avoid any question In order to achieve this goal it is structured in chapters all the way from the molecule and the cell to consciousness and free will The book targets mainly the mental health care professionals as an audience and to a lesser extend the other health professionals It is written according to the author s view concerning the training and educational needs of Psychiatrists and Psychologists and to a lesser degree of Neurologists and Neuroscientists in general **Current Catalog** National Library of Medicine (U.S.),1993
