Alternative Therapies For Cancer And Common Ailments:

The Complete Guide to Complementary Therapies in Cancer Care Barrie R. Cassileth, 2011 This book guides the way through the often confusing maze of complementary and alternative therapies promoted to cancer patients and survivors. The functions, benefits, backgrounds, and risks are clearly presented from publisher description. *Complete Guide To Complementary Therapies In Cancer Care, The: Essential Information For Patients, Survivors And Health Professionals* Barrie R Cassileth, 2011-07-18 With recent clinical advances, millions of people survive many years after a cancer diagnosis. And while their physicians deliver conventional evidence-based therapies to treat the cancer, sometimes the cancer patient and his or her symptoms are not treated with equal skill. To manage their physical and emotional symptoms and promote health and well-being, most cancer patients and survivors use complementary therapies: Naturopathy, Ayurveda, herbalism, homeopathy, hypnosis, yoga, acupuncture, music therapy, macrobiotics, chelation therapy, colonics, hydrotherapy, and many, many more. But are they safe? Are they effective? What problems do they address? What are the risks? When can they help? This unique and comprehensive book guides the way through the often confusing maze of complementary and alternative therapies promoted to cancer patients and survivors. The functions, benefits, backgrounds, and risks are clearly presented. Learning when, if, and how to use them provides medical professionals, cancer patients, and survivors with the information they need to better control the symptoms and side effects of cancer and its treatment. Unfortunately, using some of these therapies without this expert guidance can lead to medical complications or worse. *The Complete Guide to Complementary Therapies in Cancer Care* is an invaluable resource in making educated health care decisions for managing life during and after cancer. Through the wise and informed use of these approaches, cancer patients, whether just diagnosed during treatment or throughout Survivorship, are better able to manage the physical and emotional stresses that accompany cancer, leading to symptom control and improved quality of life. *A Compendium of Essays on Alternative Therapy* Arup Bhattacharya, 2012-01-20 *A Compendium of Essays on Alternative Therapy* is aimed at both conventional and alternate therapy practitioners, besides serving as an educational tool for students and lay persons on the progress made in the field. While this resource is not all inclusive, it does reflect the current theories from different international experts in the field. This will hopefully stimulate more research initiatives, funding, and critical insight in the already increasing demand for alternate therapies that has been evidenced worldwide.

Sun, Hailian Shi, Hemant Goyal, 2023-07-18 Gastrointestinal GI cancers including esophageal gastric and colorectal cancers are one of the major malignant diseases detrimental to health and account for almost 20% of all cancers worldwide. Besides their high incidence, GI cancers are related to high mortality rates, placing these malignancies among the most prominent public health issues of our time. Gastrointestinal diseases are prevalent, especially functional gastrointestinal disorders. Natural products have been used for thousands of years in the treatment of gastrointestinal diseases, including cancer. To discover and develop the natural product with therapeutic selectivity and without toxicity are very important steps in the treatment of GI diseases. Because of their wide range of pharmacologic activities and low toxicity in animal models, many natural products have been used as alternative treatments for gastrointestinal diseases and cancers. Growing evidence has shown that natural products are beneficial for patients with gastrointestinal diseases or cancer, but it is still unconvincing, and the mechanism behind the effect has not been fully revealed. In this Research Topic, we emphasize: 1. evaluation of clinical effectiveness of natural products in the treatment of gastrointestinal diseases, including cancer; 2. mechanism of action of natural products; 3. translation of natural products into routine practice.
