Algae As Experimental Systems:

Algae as Experimental Systems Annette W. Coleman, 1989 *Algae as Experimental Systems* Annette W. Coleman, Lynda J. Goff, Janet R. Stein-Taylor, 1989 **Algae as Experimental Systems**, 1989 **Biologistics for Space Systems Symposium, May 1962**, 1962 *The Cytoskeleton of the Algae* Diedrik Menzel, 2024-12-20 The Cytoskeleton of the Algae provides a comprehensive examination of the structural features of the cytoskeleton in phylogenetic branches of algae. The book also analyzes the possible functions of cytoskeletal components using structural, physiological, genetic, and molecular approaches. Many taxa are described in detail, mirroring the dramatic progress that has been made in recent years in this new research field. Many unique structural elements and motility phenomena are described for the first time, and other features common to all plant cells, such as cell polarity, cytoplasmic streaming, mitosis, cell wall deposition, and contractile events, are analyzed using algae as experimental model systems. The Cytoskeleton of the Algae reflects the enormous impact that research on the algal cytoskeleton has on both phycology and plant cell biology, and it will serve as an excellent reference volume for researchers in this area. *Analysis of Ecological Systems: State-of-the-Art in Ecological Modelling* W.K. Lauenroth, G.V. Skogerboe, M. Flug, 2013-10-22 The International Society for Ecological Modelling (ISEM) sponsors conferences, workshops, and training courses with the aim of advancing the development of ecological and environmental modelling. The 3rd International Conference on the state of the art in ecological modelling was sponsored by the ISEM in cooperation with the National Park Service Water Resources Laboratory and hosted by the Natural Resource Ecology Laboratory at Colorado State University. Its theme was the application of ecological modelling to environmental management, and this book contains the full texts of the three invited papers presented in the five general sessions, plus the final summaries and syntheses of the topics covered during those sessions. *Algae and Human Affairs* Carole A. Lembi, J. Robert Waaland, 1988 This volume aims to provide a detailed synthesis of the major roles that algae play in human life. The book is divided into four parts covering both the valuable and detrimental effects of algae, and the final section considers their current and future applications to industry and space exploration. **Seaweed Ecology and Physiology** Christopher S. Lobban, Paul J. Harrison, 1994 A rewritten and reorganised edition of *The Physiological Ecology of Seaweeds* 1985. *Seaweed Ecology and Physiology* surveys the broad literature, but it is not merely an update of the earlier book. This book contains an introductory chapter reviewing seaweed morphology, cytology, and life histories. The chapter on community level ecology now includes six guest essays by senior algal ecologists, which convey the excitement of phycological research. The treatment of tropical seaweeds had been expanded, reflecting the growing literature from tropical regions and the authors' experiences in the tropics. The final chapter on mariculture is much larger and includes a case study on how principles of physiological ecology were applied in developing the carrageenan industry. Finally, there is an appendix summarising the taxonomic position and nomenclature of the species mentioned in the book. *Photosynthesis in Algae* Anthony W. D. Larkum, S.

Douglas, John A. Raven, 2012-12-06 This book introduces the reader to algal diversity as currently understood and then traces the photosynthetic structures and mechanisms that contribute so much to making the algae unique Indeed the field is now so large that no one expert can hope to cover it all The 19 articles are each written by experts in their area ranging over all the essential aspects and making for a comprehensive coverage of the whole field Important developments in molecular biology especially transformation mutants in Chlamydomonas are dealt with as well as areas important to global climate change carbon dioxide exchange light harvesting energy transduction biotechnology and many others The book is intended for use by graduate students and beginning researchers in the areas of molecular and cell biology integrative biology plant biology biochemistry and biophysics biotechnology global ecology and phycology **Bioregenerative Life-Support Systems for Crewed Missions to the Moon and Mars** Cyprien Verseux, Jean-Pierre Paul de Vera, Natalie Leys, Lucie Poulet, 2022-10-20

Petersen, Victor S. Kennedy, William C. Dennison, W. Michael Kemp, 2010-01-23 Enclosed ecosystem experiments have gained in popularity as research tools in ecological science particularly in the study of coastal aquatic environments These systems provide scientists with a degree of experimental control that is not achievable through field experiments Yet to date techniques for systematically extrapolating results from small scale experimental ecosystems to larger deeper more open more biologically diverse and more heterogeneous ecosystems in nature have not been well developed Likewise researchers have lacked methods for comparing and extrapolating information among natural ecosystems that differ in scale Enclosed Experimental Ecosystems and Scale Tools for Understanding and Managing Coastal Ecosystems provides scientists managers and policy makers with an introduction to what has been termed the problem of scale and presents information that will allow for improved design and interpretation of enclosed experimental aquatic ecosystems The book integrates the results of a 10 year research project involving a multi disciplinary team of scientists and students to explore scale related questions in a variety of coastal habitats Anticipating use as a reference the book has been designed so that individual sections and

individual pages can function as stand alone units Coralline Algae: Globally Distributed Ecosystem Engineers Laurie Carol Hofmann, Nick Kamenos, João Silva, Nadine Schubert, Paulo Antunes Horta, Julio Aguirre, Kathryn Schoenrock, 2020-07-08

Effect of Operational Variables on Nitrogen Transformations in Duckweed Stabilization Ponds Julia Rosa Caicedo Bejarano, 2005-03-24 There is an urgent need to develop and improve low cost technologies for wastewater treatment Simultaneously treating wastewater and producing duckweed in a pond system is therefore an attractive solution contributing to both environmental protection and food production Duckweed has excellent qualities a high protein content a high growth rate and is an easy crop to handle The small plant turns nitrogen from wastewater into a food source This thesis reports on the effect of different operational variables like anaerobic pre treatment the combination of algae and duckweed ponds and pond depth Improved nitrogen removal was obtained through the combination of duckweed ponds with algae ponds Duckweed pond systems could be designed with shallow depth without affecting nitrogen removal efficiency This research is the result of the cooperative effort between the EIDENAR Univalle Cali Colombia and the UNESCO IHE Institute for Water Education in Delft the Netherlands *Progress in Botany* Karl Esser, 2012-12-06
