Algebraic Coding Theory Systems Science S:

Algebraic Coding Theory (Revised Edition) Elwyn R Berlekamp, 2015-03-26 This is the revised edition of Berlekamp's famous book *Algebraic Coding Theory* originally published in 1968 wherein he introduced several algorithms which have subsequently dominated engineering practice in this field. One of these is an algorithm for decoding Reed Solomon and Bose Chaudhuri Hocquenghem codes that subsequently became known as the Berlekamp Massey Algorithm. Another is the Berlekamp algorithm for factoring polynomials over finite fields whose later extensions and embellishments became widely used in symbolic manipulation systems. Other novel algorithms improved the basic methods for doing various arithmetic operations in finite fields of characteristic two. Other major research contributions in this book included a new class of Lee metric codes and precise asymptotic results on the number of information symbols in long binary BCH codes. Selected chapters of the book became a standard graduate textbook. Both practicing engineers and scholars will find this book to be of great value.

Algebraic Coding Theory and Applications Carlos R. P. Hartmann, Giuseppe Longo, 2013-12-19

Advances in Information Systems Science Julius T. Tou, 2012-12-06 Information systems science is advancing in various directions with rapid strides. Many diversified ideas and methodologies have been revised and extended. Numerous new techniques and approaches have been conceived and developed. Some recent advances are covered in this series. The fourth volume of this series provides in depth discussions of some newly developed theories and techniques concerning computer language level augmentation, time sharing systems, text editing systems, grammars and automata, and error correcting codes in computer arithmetic. In Chapter 1 V K Smirnov presents an authoritative review of the augmentation of machine language level. He discusses the effects of extension of computer functions upon machine language and the influence of development of software systems upon the augmentation of computer language level. Some specific ways of augmenting the machine language level are examined. The problem of information organization, storage, search, and retrieval in a computer is studied. The introduction of higher level languages has stimulated widespread applications of computers. Formal language theory has been recognized as a topic of fundamental importance in the study of information systems science. In Chapter 2 M A Harrison examines the phrase structure grammars, the right linear grammars, the context free grammars, the LR k grammars, and the context sensitive grammars. The author discusses the relations between mathematical models of computers and a family of formal languages. The language theory may stimulate new ideas for the augmentation of machine language level.

Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously
