Algebraic Geometry Lecture Notes In Mathematics Volume 1417:

The Art of Doing Algebraic Geometry Thomas Dedieu, Flaminio Flamini, Claudio Fontanari, Concettina Galati, Rita Pardini, 2023-04-14 This volume is dedicated to Ciro Ciliberto on the occasion of his 70th birthday and contains refereed papers offering an overview of important parts of current research in algebraic geometry and related research in the history of mathematics It presents original research as well as surveys both providing a valuable overview of the current state of the art of the covered topics and reflecting the versatility of the scientific interests of Ciro Ciliberto *Algebraic Cycles and Hodge Theory* Mark L. Green, Jacob P. Murre, Claire Voisin, 2004-09-02 The main goal of the CIME Summer School on Algebraic Cycles and Hodge Theory has been to gather the most active mathematicians in this area to make the point on the present state of the art Thus the papers included in the proceedings are surveys and notes on the most important topics of this area of research They include infinitesimal methods in Hodge theory algebraic cycles and algebraic aspects of cohomology and k theory transcendental methods in the study of algebraic cycles **Transcendental Methods in Algebraic Geometry** Jean-Pierre Demailly, Thomas Peternell, Gang Tian, Andrej N. Tyurin, 2006-11-14 **Interactions of Classical and Numerical Algebraic Geometry** Daniel James Bates, 2009-09-16 This volume contains the proceedings of the conference on Interactions of Classical and Numerical Algebraic Geometry held May 22-24 2008 at the University of Notre Dame in honor of the achievements of Professor Andrew J Sommese While classical algebraic geometry has been studied for hundreds of years numerical algebraic geometry has only recently been developed Due in large part to the work of Andrew Sommese and his collaborators the intersection of these two fields is now ripe for rapid advancement The primary goal of both the conference and this volume is to foster the interaction between researchers interested in classical algebraic geometry and those interested in numerical methods The topics in this book include but are not limited to various new results in complex algebraic geometry a primer on Seshadri constants analyses and presentations of existing and novel numerical homotopy methods for solving polynomial systems a numerical method for computing the dimensions of the cohomology of twists of ideal sheaves and the application of algebraic methods in kinematics and phylogenetics **The Canonical Ring of a Stacky Curve** John Voight, David Zureick-Brown, 2022-05-24 View the abstract [Complex Analysis and Geometry](#) Vincenzo Ancona, Alessandro Silva, 2013-11-11 The papers in this wide ranging collection report on the results of investigations from a number of linked disciplines including complex algebraic geometry complex analytic geometry of manifolds and spaces and complex differential geometry [ADVANCED ALGEBRA](#) Dr. Antony P. V., 2021-05-04 *Moduli of K-stable Varieties* Giulio Codogni, Ruadhaí Dervan, Filippo Viviani, 2019-06-27 This volume is an outcome of the workshop Moduli of K-stable Varieties which was held in Rome Italy in 2017 The content focuses on the existence problem for canonical Kähler metrics and links to the algebro-geometric notion of K-stability The book includes both surveys on this problem notably in the case of Fano varieties and original contributions addressing this and related problems The papers in the latter group

develop the theory of K stability explore canonical metrics in the Kähler and almost Kähler settings offer new insights into the geometric significance of K stability and develop tropical aspects of the moduli space of curves the singularity theory necessary for higher dimensional moduli theory and the existence of minimal models Reflecting the advances made in the area in recent years the survey articles provide an essential overview of many of the most important findings The book is intended for all advanced graduate students and researchers who want to learn about recent developments in the theory of moduli space K stability and Kähler Einstein metrics Algebraic Geometry Paolo Francia, 2002 The papers in this volume cover a wide spectrum of algebraic geometry from motives theory to numerical algebraic geometry and are mainly focused on higher dimensional varieties and Minimal Model Program and surfaces of general type Projective Geometry and Formal Geometry Lucian Badescu, 2012-12-06 The aim of this monograph is to introduce the reader to modern methods of projective geometry involving certain techniques of formal geometry Some of these methods are illustrated in the first part through the proofs of a number of results of a rather classical flavor involving in a crucial way the first infinitesimal neighbourhood of a given subvariety in an ambient variety Motivated by the first part in the second formal functions on the formal completion X_Y of X along a closed subvariety Y are studied particularly the extension problem of formal functions to rational functions The formal scheme X_Y introduced to algebraic geometry by Zariski and Grothendieck in the 1950s is an analogue of the concept of a tubular neighbourhood of a submanifold of a complex manifold It is very well suited to study the given embedding $Y \subset X$ The deep relationship of formal geometry with the most important connectivity theorems in algebraic geometry or with complex geometry is also studied Some of the formal methods are illustrated and applied to homogeneous spaces The book contains a lot of results obtained over the last thirty years many of which never appeared in a monograph or textbook It addresses to algebraic geometers as well as to those interested in using methods of algebraic geometry **Max-Planck-Gesellschaft Jahrbuch**, 1991 **Commutative Algebra and Algebraic Geometry** Freddy Van Oystaeyen, 1999-03-31 Contains contributions by over 25 leading international mathematicians in the areas of commutative algebra and algebraic geometry The text presents developments and results based on and inspired by the work of Mario Fiorentini It covers topics ranging from almost numerical invariants of algebraic curves to deformation of projective schemes **The Adjunction Theory of Complex Projective Varieties** Mauro C. Beltrametti, Andrew J. Sommese, 2011-06-03 The aim of the series is to present new and important developments in pure and applied mathematics Well established in the community over two decades it offers a large library of mathematics including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers wishing to thoroughly study the topic Editorial Board Lev Birbrair Universidade Federal do Ceará Fortaleza Brasil Victor P Maslov Russian Academy of Sciences Moscow Russia Walter D Neumann Columbia University New York USA Markus J Pflaum

University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany *Classical Diophantine Equations* Vladimir G. Sprindzuk, 2006-11-15 The author had initiated a revision and translation of Classical Diophantine Equations prior to his death Given the rapid advances in transcendence theory and diophantine approximation over recent years one might fear that the present work originally published in Russian in 1982 is mostly superseded That is not so A certain amount of updating had been prepared by the author himself before his untimely death Some further revision was prepared by close colleagues The first seven chapters provide a detailed virtually exhaustive discussion of the theory of lower bounds for linear forms in the logarithms of algebraic numbers and its applications to obtaining upper bounds for solutions to the eponymous classical diophantine equations The detail may seem stark the author fears that the reader may react much as does the tourist on first seeing the centre Pompidou notwithstanding that Sprind zuk maintains a pleasant and chatty approach full of wise and interesting remarks His emphases well warrant now that the book appears in English close study and emulation In particular those emphases allow him to devote the eighth chapter to an analysis of the interrelationship of the class number of algebraic number fields involved and the bounds on the heights of the solutions of the diophantine equations Those ideas warrant further development The final chapter deals with effective aspects of the Hilbert Irreducibility Theorem harkening back to earlier work of the author There is no other congenial entry point to the ideas of the last two chapters in the literature *Complex Projective Geometry* G. Ellingsrud, 1992-07-30 A volume of papers describing new methods in algebraic geometry *Nearly Projective Boolean Algebras* Lutz Heindorf, Leonid B. Shapiro, 2006-11-14 The book is a fairly complete and up to date survey of projectivity and its generalizations in the class of Boolean algebras Although algebra adds its own methods and questions many of the results presented were first proved by topologists in the more general setting of not necessarily zero dimensional compact spaces An appendix demonstrates the application of advanced set theoretic methods to the field The intended readers are Boolean and universal algebraists The book will also be useful for general topologists wanting to learn about kappa metrizable spaces and related classes The text is practically self contained but assumes experience with the basic concepts and techniques of Boolean algebras **Vector Bundles and Representation Theory** Steven Dale Cutkosky, 2003 This volume contains 13 papers from the conference on Hilbert Schemes Vector Bundles and Their Interplay with Representation Theory The papers are written by leading mathematicians in algebraic geometry and representation theory and present the latest developments in the field Among other contributions the volume includes several very impressive and elegant theorems in representation theory by R Friedman and J W Morgan convolution on homology groups of moduli spaces of sheaves on K3 surfaces by H Nakajima and computation of the S1 fixed points in Quot schemes and mirror principle computations for Grassmanians by S T Yau et al The book is of interest to graduate students and researchers in algebraic geometry representation theory topology and their applications to high energy physics **Manuscripta Mathematica** , 1992 *Complex Analysis and Algebraic Geometry*

Thomas Peternell, Frank-Olaf Schreyer, 2016-12-19 No detailed description available for Complex Analysis and Algebraic Geometry Clifford Wavelets, Singular Integrals, and Hardy Spaces Marius Mitrea, 2006-11-15 The book discusses the extensions of basic Fourier Analysis techniques to the Clifford algebra framework Topics covered construction of Clifford valued wavelets Calderon Zygmund theory for Clifford valued singular integral operators on Lipschitz hyper surfaces Hardy spaces of Clifford monogenic functions on Lipschitz domains Results are applied to potential theory and elliptic boundary value problems on non smooth domains The book is self contained to a large extent and well suited for graduate students and researchers in the areas of wavelet theory Harmonic and Clifford Analysis It will also interest the specialists concerned with the applications of the Clifford algebra machinery to Mathematical Physics
