Algebraic Groups and Their Birational Invariants, *Reduction Theory and Arithmetic Groups* Joachim Schwermer, 2022-12-15 Build a solid foundation in the area of arithmetic groups and explore its inherent geometric and number theoretical components **Algebraic Groups and Number Theory** Vladimir Petrovich Platonov, Vladimir Platonov, Andrei Rapinchuk, Igor Rapinchuk, 2023-09-07 The first volume of a two volume book offering a comprehensive account of the arithmetic theory of algebraic groups **Algebraic Groups and Number Theory: Volume 1** Vladimir Platonov, Andrei Rapinchuk, Igor Rapinchuk, 2023-09-07 The first edition of this book provided the first systematic exposition of the arithmetic theory of algebraic groups This revised second edition now published in two volumes retains the same goals while incorporating corrections and improvements as well as new material covering more recent developments Volume I begins with chapters covering background material on number theory algebraic groups and cohomology both abelian and non abelian and then turns to algebraic groups over locally compact fields The remaining two chapters provide a detailed treatment of arithmetic subgroups and reduction theory in both the real and adelic settings Volume I includes new material on groups with bounded generation and abstract arithmetic groups With minimal prerequisites and complete proofs given whenever possible this book is suitable for self study for graduate students wishing to learn the subject as well as a reference

for researchers in number theory algebraic geometry and related areas *Multiplicative Invariant Fields of Dimension $\leq q$* Akinari Hoshi, Ming-chang Kang, Aiichi Yamasaki, 2023-03-09 View the abstract [The Brauer–Grothendieck Group](#) Jean-Louis Colliot-Thélène, Alexei N. Skorobogatov, 2021-07-30 This monograph provides a systematic treatment of the Brauer group of schemes from the foundational work of Grothendieck to recent applications in arithmetic and algebraic geometry The importance of the cohomological Brauer group for applications to Diophantine equations and algebraic geometry was discovered soon after this group was introduced by Grothendieck The Brauer Manin obstruction plays a crucial role in the study of rational points on varieties over global fields The birational invariance of the Brauer group was recently used in a novel way to establish the irrationality of many new classes of algebraic varieties The book covers the vast theory underpinning these and other applications Intended as an introduction to cohomological methods in algebraic geometry most of the book is accessible to readers with a knowledge of algebra algebraic geometry and algebraic number theory at graduate level Much of the more advanced material is not readily available in book form elsewhere notably de Jong's proof of Gabber's theorem the specialisation method and applications of the Brauer group to rationality questions an in depth study of the Brauer Manin obstruction and proof of the finiteness theorem for the Brauer group of abelian varieties and K3 surfaces over finitely generated fields The book surveys recent work but also gives detailed proofs of basic theorems maintaining a balance between general theory and concrete examples Over half a century after Grothendieck's foundational seminars on the topic *The Brauer–Grothendieck Group* is a treatise that fills a longstanding gap in the literature providing researchers including research students with a valuable reference on a central object of algebraic and arithmetic geometry

Algebraic Groups J. S. Milne, 2017-09-21 Comprehensive introduction to the theory of algebraic group schemes over fields based on modern algebraic geometry with few prerequisites *Local Fields and Their Extensions: Second Edition* Ivan B. Fesenko, S. V. Vostokov, 2002-07-17 This book offers a modern exposition of the arithmetical properties of local fields using explicit and constructive tools and methods It has been ten years since the publication of the first edition and according to Mathematical Reviews 1 000 papers on local fields have been published during that period This edition incorporates improvements to the first edition with 60 additional pages reflecting several aspects of the developments in local number theory The volume consists of four parts elementary properties of local fields class field theory for various types of local fields and generalizations explicit formulas for the Hilbert pairing and Milnor groups of fields and of local fields The first three parts essentially simplify revise and update the first edition The book includes the following recent topics Fontaine Wintenberger theory of arithmetically profinite extensions and fields of norms explicit noncohomological approach to the reciprocity map with a review of all other approaches to local class field theory Fesenko's class field theory for local fields with perfect residue field simplified updated presentation of Vostokov's explicit formulas for the Hilbert norm residue symbol and Milnor groups of local fields Numerous exercises introduce the reader to other important recent results in local number

Zima, 2009-11-06 The Second Waterloo Workshop on Computer Algebra was dedicated to the 70th birthday of combinatorics pioneer Georgy Egorychev This book of formally refereed papers submitted after that workshop covers topics closely related to Egorychev's influential works **Algebraic Groups** Yuri Tschinkel, 2007 *Algebraic Geometry: Salt Lake City 2015* Richard Thomas, 2018-06-01 This is Part 2 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come *American Mathematical Society Translations* United States. Office of Naval Research, 2001-04-10 The articles in this collection present new results in combinatorics algebra algebraic geometry dynamical systems analysis and probability Of particular interest is the survey article by A N Kirillov devoted to combinatorics of Young diagrams and related problems of representation theory Also included are articles devoted to the eightieth birthday of renowned Russian mathematician V A Rokhlin Remembrances of V A Rokhlin by I R Shafarevich and An Unfinished Project of V A Rokhlin by V N Sudakov The results ideas and methods given in the book will be of interest to a broad range of specialists **Metric Characterization of Random Variables and Random Processes** Valeriĭ Vladimirovich Buldygin, IŮ. V. Kozachenko, 2000-01-01 The topic covered in this book is the study of metric and other close characteristics of different spaces and classes of random variables and the application of the entropy method to the investigation of properties of stochastic processes whose values or increments belong to given spaces The following processes appear in detail pre Gaussian processes shot noise processes representable as integrals over processes with independent increments quadratically Gaussian processes and in particular correlogram type estimates of the correlation function of a stationary Gaussian process jointly strictly sub Gaussian processes etc The book consists of eight chapters divided into four parts The first part deals with classes of random variables and their metric characteristics The second part presents properties of stochastic processes imbedded into a space of random variables discussed in the first part The third part considers applications of the general theory The fourth part outlines the necessary auxiliary material Problems

and solutions presented show the intrinsic relation existing between probability methods analytic methods and functional methods in the theory of stochastic processes The concluding sections Comments and References gives references to the literature used by the authors in writing the book **Painleve Equations through Symmetry** Masatoshi

Noumi,2004-01-01 This book is devoted to the symmetry of Painleve equations especially those of types II and IV The author studies families of transformations for several types of Painleve equationsQthe so called Backlund transformationsQwhich transform solutions of a given Painleve equation to solutions of the same equation with a different set of parameters It turns out that these symmetries can be interpreted in terms of root systems associated to affine Weyl groups The author describes the remarkable combinatorial structures of these symmetries and shows how they are related to the theory of tau functions associated to integrable systems Algebraic Geometry 2 Kenji Ueno,1999 Modern algebraic geometry is built upon two fundamental notions schemes and sheaves The theory of schemes was explained in Algebraic Geometry 1 From Algebraic Varieties to Schemes see Volume 185 in the same series Translations of Mathematical Monographs In the present book Ueno turns to the theory of sheaves and their cohomology Loosely speaking a sheaf is a way of keeping track of local information defined on a topological space such as the local holomorphic functions on a complex manifold or the local sections of a vector bundle To study schemes it is useful to study the sheaves defined on them especially the coherent and quasicoherent sheaves The primary tool in understanding sheaves is cohomology For example in studying ampleness it is frequently useful to translate a property of sheaves into a statement about its cohomology The text covers the important topics of sheaf theory including types of sheaves and the fundamental operations on them such as coherent and quasicoherent sheaves proper and projective morphisms direct and inverse images Cech cohomology For the mathematician unfamiliar with the language of schemes and sheaves algebraic geometry can seem distant However Ueno makes the topic seem natural through his concise style and his insightful explanations He explains why things are done this way and supplements his explanations with illuminating examples As a result he is able to make algebraic geometry very accessible to a wide audience of non specialists The book contains numerous problems and exercises with solutions It would be an excellent text for the second part of a course in algebraic geometry Algebraic Geometry 1 Kenji Ueno,2003 Quadratic Forms, Linear Algebraic Groups, and Cohomology Skip Garibaldi,R. Sujatha,Venapally Suresh,2010-07-16 Developments in Mathematics is a book series devoted to all areas of mathematics pure and applied The series emphasizes research monographs describing the latest advances Edited volumes that focus on areas that have seen dramatic progress or are of special interest are encouraged as well
