Chaumine, James William Peter Hirschfeld, Robert Rolland, 2008 This volume covers many topics including number theory Boolean functions combinatorial geometry and algorithms over finite fields It contains many new theoretical and applicable results as well as surveys that were presented by the top specialists in these areas New results include an answer to one of Serre's questions posted in a letter to Top cryptographic applications of the discrete logarithm problem related to elliptic curves and hyperelliptic curves construction of function field towers construction of new classes of Boolean cryptographic functions and algorithmic applications of algebraic geometry Introduction to Algebraic Geometry Igor Kriz, Sophie

Kriz, 2021-03-13 The goal of this book is to provide an introduction to algebraic geometry accessible to students Starting from solutions of polynomial equations modern tools of the subject soon appear motivated by how they improve our understanding of geometrical concepts In many places analogies and differences with related mathematical areas are explained The text approaches foundations of algebraic geometry in a complete and self contained way also covering the underlying algebra The last two chapters include a comprehensive treatment of cohomology and discuss some of its applications in algebraic

geometry **Algebraic Geometry and Its Applications** Sergej Michajlovic Nikolsky, 1985 Algebraic Geometry Dr. B.

Phalaksha Murthy, Dr. P. Somashekhara, Prof. P. Somashekar, 2024-09-20 Algebraic Geometry is a profound exploration of the intersection between algebra and geometry delving into the study of geometric structures defined by polynomial equations This book covers foundational topics such as varieties schemes and morphisms bridging abstract algebraic theories with tangible geometric interpretations Through rigorous proofs and illustrative examples it guides readers from basic concepts to advanced topics including cohomology intersection theory and moduli spaces Ideal for mathematicians and students

Algebraic Geometry serves both as a comprehensive introduction and as a reference for deeper mathematical inquiries in geometry Algorithms In Algebraic Geometry And Applications Laureano Gonzalez-Vega, 1996-06 This volume arises from the contributions presented at the MEGA 94 Conference Metodos Efectivos en Geometria Algebraica Effective Methods in Algebraic Geometry held at the University of Cantabria Santander Spain April 5-9 1994 Previous sessions of this biannual conference had taken place in Castiglione del Tevere Livorno Italy 1990 and in Nice France 1992 and the corresponding proceedings have been published in the Birkhauser series Progress in Mathematics volumes no 94 and 109 respectively The present collection consists of twenty articles involving miscellaneous topics concerning algorithms in algebra algebraic geometry and related applications Fourteen of these papers correspond to the contents of the Conference's regular scientific

program and have been selected by the MEGA Committee from the submitted contributions after a very rigorous refereeing procedure entailing an average of three independent reports per paper and two Program Committee panel discussions before and after the Conference. The remaining six papers by S Beck, M Kreuzer, M Bronstein, E V Flvnn, I Itenberg, J P Merlet and I Seppala correspond to invited talks and have also been subject to a post conference refereeing procedure.

Homotopical Algebraic Geometry II: Geometric Stacks and Applications Bertrand Toën, Gabriele Vezzosi, 2008. This is the second part of a series of papers called HAG devoted to developing the foundations of homotopical algebraic geometry. The authors start by defining and studying generalizations of standard notions of linear algebra in an abstract monoidal model category such as derivations, Tate and smooth morphisms, flat and projective modules etc. They then use their theory of stacks over model categories to define a general notion of geometric stack over a base symmetric monoidal model category $\mathcal{C}$ and prove that this notion satisfies the expected properties.

Applications of Computational Algebraic Geometry David A. Cox, Dinesh N. Manocha, 1998. This book introduces readers to key ideas and applications of computational algebraic geometry. Beginning with the discovery of Gröbner bases and fueled by the advent of modern computers and the rediscovery of resultants, computational algebraic geometry has grown rapidly in importance. The fact that crunching equations is now as easy as crunching numbers has had a profound impact in recent years. At the same time, the mathematics used in computational algebraic geometry is unusually elegant and accessible, which makes the subject easy to learn and easy to apply. This book begins with an introduction to Gröbner bases and resultants, then discusses some of the more recent methods for solving systems of polynomial equations. A sampler of possible applications follows, including computer-aided geometric design, complex information systems, integer programming, and algebraic coding theory. The lectures in this book assume no previous acquaintance with the material.

Representation Theory and Algebraic Geometry A. Martsinkovsky, Gordana Todorov, 1997-05-15. For any researcher working in representation theory, algebraic or arithmetic geometry.

Applications of Computational Algebraic Geometry David A. Cox, Dinesh N. Manocha, Bernd Sturmfels, *Introduction to Modern Algebra and Its Applications* Nadiya Gubareni, 2021-06-23. The book provides an introduction to modern abstract algebra and its applications. It covers all major topics of classical theory of numbers, groups, rings, fields, and finite dimensional algebras. The book also provides interesting and important modern applications in such subjects as Cryptography, Coding Theory, Computer Science, and Physics. In particular, it considers algorithms for RSA secret sharing, Diffie-Hellman Scheme, and ElGamal cryptosystem based on discrete logarithm problem. It also presents Buchberger's algorithm, which is one of the important algorithms for constructing Gröbner basis.

Key Features: Covers all major topics of classical theory of modern abstract algebra such as groups, rings, and fields and their applications. In addition, it provides the introduction to the number theory, theory of finite fields, finite dimensional algebras, and their applications. Provides interesting and important modern applications in such subjects as

Cryptography Coding Theory Computer Science and Physics Presents numerous examples illustrating the theory and applications It is also filled with a number of exercises of various difficulty Describes in detail the construction of the Cayley Dickson construction for finite dimensional algebras in particular algebras of quaternions and octonions and gives their applications in the number theory and computer graphics *Current Developments in Algebraic Geometry* Lucia Caporaso, 2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry *Galois Representations in Arithmetic Algebraic Geometry* A. J. Scholl, Richard Lawrence Taylor, 1998-11-26 Conference proceedings based on the 1996 LMS Durham Symposium Galois representations in arithmetic algebraic geometry **Number Theory and Algebraic Geometry** Miles Reid, Alexei Skorobogatov, 2003 Sir Peter Swinnerton Dyer's mathematical career encompasses more than 60 years work of amazing creativity This volume provides contemporary insight into several subjects in which Sir Peter's influence has been notable and is dedicated to his 75th birthday The opening section reviews some of his many remarkable contributions to mathematics and other fields The remaining contributions come from leading researchers in analytic and arithmetic number theory and algebraic geometry The topics treated include rational points on algebraic varieties the Hasse principle Shafarevich Tate groups of elliptic curves and motives Zagier's conjectures descent and zero cycles Diophantine approximation and Abelian and Fano varieties
