Sehgal, 2009 This volume represents the proceedings of the conference on Groups Rings and Group Rings held July 28 August 2 2008 in Ubatuba Brazil Papers in this volume contain results in active research areas in the theory of groups group rings and algebras including noncommutative rings polynomial identities Lie algebras and superalgebras In particular topics such as growth functions on varieties groups of units in group rings representation theory of Lie algebras Jordan alternative and Leibniz algebras graded identities automorphisms of trees and partial actions are discussed

Groups, Rings, Lie and Hopf Algebras, 2003-03-31 The volume is almost entirely composed of the research and expository papers by the participants of the International Workshop Groups Rings Lie and Hopf Algebras which was held at the Memorial University of Newfoundland St John's NF Canada All four areas from the title of the workshop are covered In addition some chapters touch upon the topics which belong to two or more areas at the same time Audience The readership targeted includes researchers graduate and senior undergraduate students in mathematics and its applications

Group Rings and Class Groups K.W. Roggenkamp, M.J. Taylor, 1992-03-31 The workshops organized by the Gesellschaft für mathematische Forschung in cooperation with the Deutsche Mathematiker Vereinigung German Mathematics Society are intended to help in particular students and younger mathematicians to obtain an introduction to fields of current research Through the means of these well organized seminars scientists and younger mathematicians to obtain an introduction to fields of current research Through the means of these well organized seminars scientists from other fields can also be introduced to new mathematical ideas The publication of these workshops in the series DMV SEMINAR will make all the material available to an even wider audience Publisher

A Guide to Groups, Rings, and Fields Fernando Q. Gouvêa, 2012 This Guide offers a concise overview of the theory of groups rings and fields at the graduate level emphasizing those aspects that are useful in other parts of mathematics It focuses on the main ideas and how they hang together It will be useful to both students and professionals In addition to the standard material on groups rings modules fields and Galois theory the book includes discussions of other important topics that are often omitted in the standard graduate course including linear groups group representations the structure of Artinian rings projective injective and flat modules Dedekind domains and central simple algebras All of the important theorems are

Group Identities on Units and Symmetric Units of Group Rings Gregory T Lee, 2010-08-19 Let FG be the group ring of a group G over a field F Write $U(FG)$ for the group of units of FG It is an important problem to determine the conditions under which $U(FG)$ satisfies a group identity In the mid 1990s a conjecture of Hartley was verified namely if $U(FG)$ satisfies a group identity and G is torsion then FG satisfies a polynomial identity Necessary and sufficient conditions for $U(FG)$ to satisfy a group identity soon followed Since the late 1990s many papers have been devoted to the study of the symmetric units that is those units u satisfying $u = u^{\sigma}$ where σ is the involution on FG defined by

sending each element of G to its inverse The conditions under which these symmetric units satisfy a group identity have now been determined This book presents these results for arbitrary group identities as well as the conditions under which the unit group or the set of symmetric units satisfies several particular group identities of interest **Methods in Ring Theory**
