Strom, Robert D. Strom, 2013-09-01 Until recently educators were expected to provide all the knowledge students would need to ensure their future However the Internet has altered conditions of learning in ways that motivate students to be more self directed and less dependent on direct instruction Neuroscience discoveries about brain functioning also urge schools to adopt thinking as

an aspect of core curriculum Students who acquire thinking skills needed to locate information process and organize data generate creative and practical ideas communicate with all age groups and collaborate can adapt to technology change and social evolution Encouraging adolescents to choose some goals they pursue respects their need for autonomy Recognizing the need to amend certain goals is important so a person knows when change in personal direction is warranted Exploring careers in a low risk setting motivates realistic aspirations and helps students to shape their future Employer expectations for teamwork require attention Performing well in groups including peer and self evaluation yields productive thinking and is conducive to mental health The intended audience for this book is college students preparing to become teachers in preschool elementary or secondary education The book describes ways schools and families can support higher order thinking during childhood and adolescence Learning that occurs outside school is ignored by tests that reflect only classroom lessons New instruments that measure thinking are needed to enable transformation of school goals and evaluation of student progress Shifting to a dual emphasis on thinking and learning is a challenge for teachers of all grade levels

Storytime Lawrence R. Sipe, 2008 Presents a comprehensive theoretically grounded model of children's understanding of picture storybooks the first to focus specifically on young children Relevant to contemporary young children from a wide variety of ethnic racial and socioeconomic backgrounds this dynamic volume includes a wealth of examples of children's responses to literature and how teachers scaffold their interpretation of stories The highest recommendation I can make is that I learned so much You will too From the Foreword by P David Pearson University of California Berkeley The single most important book on this topic since Applebee's *The Child's Concept of Story* it is also a pleasure to read Lee Galda University of Minnesota Sipe provides a comprehensive theory of literary understanding specific to contemporary young children's interactions with picture books *Storytime* is grounded in well documented research and in depth knowledge of literary theory and enlivened by insightful commentary Glenna Sloan Professor Emerita Queens College of the City University of New York As a working illustrator who spends most days drawing or painting or dreaming about children's picturebooks I sometimes wonder Is there really any point to all of this In this book Larry Sipe shows me clearly wittily and thoroughly that there is Chris Raschka Caldecott Medal winning children's book author and illustrator Those of us who work with children picturebooks and teachers could have no more insightful guide to their interactions than Larry Sipe himself Nancy L Roser University of Texas Austin
