Alternating Currents Electricity And Public Policy:

Alternating Currents Timothy J. Brennan, Karen L. Palmer, Salvador A. Martinez, 2010-09-30 Many states within the U S and many countries across the world are opening their electricity markets to competition Many others are uncertain about their plans These differences emphasize the complexities involved in the technology and regulatory structure of the electricity industry an industry for which the introduction of market competition has been notoriously difficult In response to these challenges Alternating Currents provides a timely overview and analysis of the concerns facing industry regulators legislators and others as they consider whether when and how to open electricity markets Authors Brennan Palmer and Martinez offer background on the history of regulatory policy and the technology for producing and delivering electric power They then provide insights into the policy debates and economic issues involved in eleven important topics including industry structure system integrity and reliability the mitigation of market power and environmental protection Alternating Currents describes the recent events leading to the demise of retail competition in California with the intent on drawing lessons for the future In the end the authors offer their perspective about what makes electricity a unique resource and how those factors make the potential conflict between competition and reliability the most pressing of the long term concerns about the transformation of the electric power industry

transformation of the electric power industry **Alternating Currents** Timothy J. Brennan, Karen L. Palmer, Salvador Martinez, 2002 Annotation Many states within the U S and many countries across the world are opening their electricity markets to competition Many others are uncertain about their plans These differences emphasize the complexities involved in the technology and regulatory structure of the electricity industry an industry for which the introduction of market competition has been notoriously difficult In response to these challenges Alternating Currents provides a timely overview and analysis of the concerns facing industry regulators legislators and others as they consider whether when and how to open electricity markets **The Political Economy of Power Sector Reform** David G.

Victor, Thomas C. Heller, 2007-02-08 Over the last fifteen years the world's largest developing countries have initiated market reform in their electric power sectors from generation to distribution. This book evaluates the experiences of five of those countries: Brazil, China, India, Mexico, and South Africa, as they have shifted from state-dominated systems to schemes allowing for a larger private sector role. As well as having the largest power systems in their regions and among the most rapidly rising consumption of electricity in the world, these countries are the locus of massive financial investment, and the effects of their power systems are increasingly felt in world fuel markets. This accessible volume explains the origins of these reform efforts and offers a theory as to why, despite diverse backgrounds, reform efforts in all five countries have stalled in similar ways. The authors also offer practical advice to improve reform policies. New Approaches on Energy and the Environment

Richard D. Professor Morgenstern, Paul Professor Portney, 2010-09-30 Written by economists and policy analysts at Resources for the Future, a Washington DC think tank with a tradition for independent objective research, this collection of twenty-five

memos to the President offers constructive policy options for the elected administration on critical challenges related to energy the environment and natural resources Each contributor to *New Approaches on Energy and the Environment* was asked to address the question Based on your research and knowledge what policy recommendation would you like to make to the next U S president Writing in advance of the 2004 election so as to keep their essays free of partisan interpretations the authors were asked not to confine their suggestions to what the prevailing wisdom says is politically possible They also took pains to make their ideas accessible to a busy president as well as a wide range of readers interested in a concise and authoritative overview of the nation s energy and environmental policy choices The results are provocative sometimes controversial but highly readable essays on topics including climate change oil dependency electricity regulation brownfields revitalization forest service administration air and water quality and environmental health issues such as food safety and the growing threat of antibiotic resistance When the President takes office in January 2005 he will confront competing perspectives about the priorities and approaches that should apply to energy and environmental policy Americans want cleaner air and water and healthy and attractive surroundings but they also want inexpensive fuel comfortable cars and houses and continued economic growth *New Approaches on Energy and the Environment* provides thought provoking commonsense contributions to debates about important energy and environmental issues confronting the U S today *The International Yearbook of Environmental and Resource Economics 2006/2007* Henk Folmer,Thomas H. Tietenberg,2006 This major annual publication presents a comprehensive overview of cutting edge issues in environmental and resource economics The expert contributors address some of today s most pressing environmental concerns including pollution control policies Graphical Information Systems GIS and spatial analysis disclosure strategies for pollution control environmental policy under imperfect competition transport and the environment optimal forest harvesting The Yearbook is an essential resource for economists scholars and practitioners working in environmental and resource economics Forum for Applied Research and Public Policy ,1988 **Federal Research on Electromagnetic Radiation** United States. Congress. House. Committee on Science, Space, and Technology. Subcommittee on Natural Resources, Agriculture Research, and Environment,1990 **Alternating Current - Social Innovation in Community Energy** Arwen Colell,2021-05-10 Community energy projects give their own answers to the challenges of energy system change They are social innovations By building new relations between local economies communities and technical infrastructures these projects not only change the energy system but also respective power structures Drawing on case studies from Germany Denmark and Scotland this book shows the importance of community ties and shared symbols for successful processes of transformation and develops recommendations for policy decision makers **Choosing Environmental Policy** Winston Harrington,Richard D. Morgenstern,Thomas Sterner,2010-09-30 The two distinct approaches to environmental policy include direct regulation sometimes called command and control policies and regulation by economic or market based incentives This book is the first

to compare the costs and outcomes of these approaches by examining realworld applications In a unique format paired case studies from the United States and Europe contrast direct regulation on one side of the Atlantic with an incentivebased policy on the other For example Germany s direct regulation of SO₂ emissions is compared with an incentive approach in the U S Direct regulation of water pollution via the U S Clean Water Act is contrasted with Hollands incentive based fee system Additional studies contrast solutions for eliminating leaded gasoline and reducing nitrogen oxide emissions CFCs and chlorinated solvents The cases presented in *Choosing Environmental Policy* were selected to allow the sharpest most direct comparisons of direct regulation and incentive based strategies In practice environmental policy is often a mix of both types of instruments This innovative investigation will interest scholars students and policymakers who want more precise information as to what kind of blend will yield the most effective policy Are incentive instruments more efficient than regulatory ones Do regulatory policies necessarily have higher administrative costs Are incentive policies more difficult to monitor Are firms more likely to oppose market based instruments or traditional regulation These are some of the important questions the authors address often with surprising results
