

## Process Planning

### Production Planning- Points to consider for an efficient planning

**Plan for everything and everyone:** Often, when making production plans, some machine or some person is unaccounted for. The problem here is that that machine may go down or the worker may be on leave, or worse, working on something else. Hence, plan for every machine, raw material, workstation, warehouse, and employee.

**Monitor:** Once the manufacturing process begins, things may go wrong, machines pause, or items may get misplaced. Constantly monitoring the factory floor with supervisors or with IoT devices ensures that all the pieces are moving as planned.

## Process Planning

### Bottlenecks

**Bottlenecks** are roadblocks in the production line that halt the processing of materials midway. For example, if items are waiting at the button-attach workstation for buttons to get attached, the button attach workstation is a bottleneck since it's stopping the garments from going ahead.

**Bottlenecks** can happen anywhere in the production line. Scan all the sewing machines and even check if there are enough operators to carry out tasks. Through planning and ensuring the availability of sewing machines and available resources is a good way to avoid bottlenecks.

Methodologies and Approaches* Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area      **Instrumentation, Measurement, Circuits and Systems** Tianbiao Zhang,2012-03-09 The volume includes a set of selected papers extended and revised from the 2011 International Conference on Mechanical Engineering and Technology held on London UK November 24 25 2011 Mechanical engineering technology is the application of physical principles and current technological developments to the creation of useful machinery and operation design Technologies such as solid models may be used as the basis for finite element analysis FEA and or computational fluid dynamics CFD of the design Through the application of computer aided manufacturing CAM the models may also be used directly by software to create instructions for the manufacture of objects represented by the models through computer numerically controlled CNC machining or other automated processes without the need for intermediate drawings This volume covers the subject areas of mechanical engineering and technology and also covers interdisciplinary subject areas of computers communications control and automation We hope that researchers graduate students and other interested readers benefit scientifically from the book and also find it stimulating in the process      **Signal** ,2015      *Government Reports Annual Index* ,1993      **Agent and Multi-Agent Systems: Technologies and Applications** Geun Sik Jo,Lakhmi Jain,2008-04-03 Following from the very
