*Digital Twin Driven Smart Design* Fei Tao,Ang Liu,Tianliang Hu,A.Y.C. Nee,2020-05-08 Digital Twin Driven Smart Design draws on the latest industry practice and research to establish a basis for the implementation of digital twin technology in product design Coverage of relevant design theory and methodology is followed by detailed discussions of key enabling technologies that are supported by cutting edge case studies of implementation This groundbreaking book explores how digital twin technology can bring improvements to different kinds of product design process including functional lean and green Drawing on the work of researchers at the forefront of this technology this book is the ideal guide for anyone interested in digital manufacturing or computer aided design **Advances in Industrial Design Engineering** Denis Coelho,2013-03-13 A fast paced changing world requires dynamic methods and robust theories to enable designers to deal with the new product development landscape successfully and make a difference in an increasingly interconnected world

Designers continue stretching the boundaries of their discipline and trail new paths in interdisciplinary domains constantly moving the frontiers of their practice farther This book the successor to Industrial Design New Frontiers 2011 develops the concepts present in the previous book further as well as reaching new areas of theory and practice in industrial design Advances in Industrial Design Engineering assists readers in leaping forward in their own practice and in preparing new design research that is relevant and aligned with the current challenges of this fascinating field Product Design Mike Baxter,1995-01-31 The discovery of market needs and the manufacture of a product to meet those needs are integral parts of the same process Since most textbooks on new product development are written from either a marketing or an engineering perspective it is important for students to encounter these two aspects of product development together in a single text Product Design Practical Methods for the Systematic Development of New Products covers the entire new product development process from market research through concept design embodiment design design for manufacture and product launch Systematic and practical in its approach the text offers both a structured management framework for product development and an extensive range of specific design methods Chapters feature Design Toolkits that provide detailed guidance on systematic design methods present examples with familiar products and conclude with reviews of key concepts This major text aims to turn the often haphazard and unstructured product design process into a quality controlled streamlined and manageable procedure It is ideal for students of engineering design and technology on their path to designing new products **Managing the Design-manufacturing Process** John E. Ettlie, Henry W. Stoll, 1990 This practical guide describes the administrative practices policies tools and methods that promote better coordination and shows how design manufacturing integration helps a company reduce costs improve product quality and respond quickly to customer needs and demands It examines the issues that have traditionally prevented design manufacturing collaboration and reports on the findings of a four year domestic plant study of the best strategies for promoting the integration of design and manufacturing **Transdisciplinary Engineering Methods for Social Innovation of Industry 4.0** M. Peruzzini, M. Pellicciari, C. Bil, 2018-09-14 The concept of concurrent engineering CE was first developed in the 1980s Now often referred to as transdisciplinary engineering it is based on the idea that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process PCP The main goal of CE is to increase the efficiency and effectiveness of the PCP and reduce errors in later phases as well as incorporating considerations including environmental implications for the full lifecycle of the product It has become a substantive methodology in many industries and has also been adopted in the development of new services and service support This book presents the proceedings of the 25th ISPE Inc International Conference on Transdisciplinary Engineering held in Modena Italy in July 2018 This international conference attracts researchers industry experts students and government representatives interested in recent transdisciplinary engineering research advancements and applications The book contains 120 peer reviewed papers

selected from 259 submissions from all continents of the world ranging from the theoretical and conceptual to papers addressing industrial best practice and is divided into 11 sections reflecting the themes addressed in the conference program and addressing topics as diverse as industry 4.0 and smart manufacturing human centered design modeling simulation and virtual design and knowledge and data management among others With an overview of the latest research results product creation processes and related methodologies this book will be of interest to researchers design practitioners and educators alike
