Agent Language And The Structure Of The World:

Agent, Language, and the Structure of the World Hector-Neri Castañeda, James E. Tomberlin, 1983 Language, Agency, and Politics in a Constructed World Francois Debrix, 2015-05-20 Language matters in international relations Constructivists have contributed the insight that global politics is shaped by the way agents narrate history and produce discourses about themselves and about the world This insight has induced a profound reexamination of assumptions in the study of international relations The contributors to this volume examine Part I the critical linguistic discursive techniques of postmodernists and constructivists and apply them Part II to international relations **Language, Agency, and Politics in a Constructed World** François Debrix, 2003-05-29 Language matters in international relations Constructivists have contributed the insight that global politics is shaped by the way agents narrate history and produce discourses about themselves and about the world This insight has induced a profound reexamination of assumptions in the study of international relations The contributors to this volume examine Part I the critical linguistic discursive techniques of postmodernists and constructivists and apply them Part II to international relations **Language and Time** Quentin Smith, 2002-08-01 This book offers a defense of the tensed theory of time a critique of the New Theory of Reference and an argument that simultaneity is absolute Although Smith rejects ordinary language philosophy he shows how it is possible to argue from the nature of language to the nature of reality Specifically he argues that semantic properties of tensed sentences are best explained by the hypothesis that they ascribe to events temporal properties of futurity presentness or pastness and do not merely ascribe relations of earlier than or simultaneity He criticizes the New Theory of Reference which holds that now refers directly to a time and does not ascribe the property of presentness Smith does not adopt the old or Fregean theory of reference but develops a third alternative based on his detailed theory of de re and de dicto propositions and a theory of cognitive significance He concludes the book with a lengthy critique of Einstein's theory of time Smith offers a positive argument for absolute simultaneity based on his theory that all propositions exist in time He shows how Einstein's relativist temporal concepts are reducible to a conjunction of absolutist temporal concepts and relativist nontemporal concepts of the observable behavior of light rays rigid bodies and the like **Action, Decision, and Intention** Robert Audi, 2012-12-06 Most of the papers in this collection are contributions to action theory intended to be of some relevance to one or another concern of decision theory particularly to its application to concrete human behavior Some of the papers touch only indirectly on problems of interest to decision theorists but taken together they should be of use to both decision theorists and philosophers of action Robert Audi's paper indicates how a number of questions in action theory might bear on problems in decision theory and it suggests how some action theoretic results may help in the construction or interpretation of theories of decision both normative and empirical Carl Ginet's essay lays foundations for the conception of action His volitional framework roots actions internally and conceives them as irreducibly connected with intentionality Hugh McCann's

essay is also foundational but stresses intention more than volition and lays some of the groundwork for assessing the rationality of intention and intentional action In William Alston s paper the notion of a plan as underlying intentional action is central and we are given both a conception of the structure of intentional action and a set of implicit goals and beliefs those whose content is represented in the plan which form an indispensable part of the basis on which the rationality of the action is to be judged

Agents and Artificial Intelligence Ana Paula Rocha,Luc Steels,Jaap van den Herik,2025-04-25 This two part volume LNCS constitutes the refereed post proceedings of 16th International Conference ICAART 2024 in Rome Italy in February 2024 The 24 full papers and 13 short papers included in this book were carefully reviewed and selected from 375 submissions They cover all aspects of formal methods with a strong emphasis on promoting their industrial applications and integrating them with practical engineering practices

Thought, Language, and Ontology Francesco Orilia,W.J. Rapaport,2012-12-06 The late Hector Neri Castañeda the Mahlon Powell Professor of Philosophy at Indiana University and founding editor of *Noûs* has deeply influenced current analytic philosophy with diverse contributions including guise theory the theory on indicators and quasi indicators and the proposition partition theory This volume collects 15 papers for the most part previously unpublished in ontology philosophy of language cognitive science and related areas by ex students of Professor Castañeda most of whom are now well known researchers or even distinguished scholars The authors share the conviction that Castañeda s work must continue to be explored and that his philosophical methodology must continue to be applied in an effort to further illuminate all the issues that he so deeply investigated The topics covered by the contributions include intensional contexts possible worlds quasi indicators guise theory property theory Russell s substitutional theory of propositions event theory the adverbial theory of mental attitudes existentialist ontology and Plato s Leibniz s Kant s and Peirce s ontologies An introduction by the editors relates all these themes to Castañeda s philosophical interests and methodology

Tomberlin,1983 *The Social Construction of Man, the State and War* Franke Wilmer,2004-04-16 The Social Construction of Man the State and War is the first book on conflict in the former Yugoslavia to look seriously at the issue of ethnic identity rather than treating it as a given an unquestionable variable Combining detailed analysis with a close reading of historical narratives documentary evidence and first hand interviews conducted in the former Yugoslavia Wilmer sheds new light on how ethnic identity is constructed and what that means for the future of peace and sovereignty throughout the world

, **Agent-Based Evolutionary Search** Ruhul A. Sarker,Tapabrata Ray,2010-07-12 Agent based evolutionary search is an emerging paradigm in computational intelligence offering the potential to conceptualize and solve a variety of complex problems such as currency trading production planning disaster response management business process management etc There has been a significant growth in the number of publications related to the development and applications of agent based systems in recent years which has prompted special issues of journals and dedicated sessions in premier conferences The notion of an agent with its ability to sense learn

and act autonomously allows the development of a plethora of efficient algorithms to deal with complex problems. This notion of an agent differs significantly from a restrictive definition of a solution in an evolutionary algorithm and opens up the possibility to model and capture emergent behavior of complex systems through a natural agent-oriented decomposition of the problem space. While this flexibility of representation offered by agent-based systems is widely acknowledged, they need to be designed for specific purposes capturing the right level of details and description. This edited volume is aimed to provide the readers with a brief background of agent-based evolutionary search, recent developments and studies dealing with various levels of information abstraction and applications of agent-based evolutionary systems. There are 12 peer-reviewed chapters in this book authored by distinguished researchers who have shared their experience and findings spanning across a wide range of applications.

The Cognitive Neuropsychiatry of Parkinson's Disease Patrick McNamara, 2011-08-26 A detailed examination of the major neuropsychiatric syndromes of Parkinson's disease and a cognitive theory that accounts for their neurology and phenomenology Patients with Parkinson's disease PD suffer most visibly with such motor deficits as tremor and rigidity and less obviously with a range of nonmotor symptoms including autonomic dysfunction mood disorders and cognitive impairment The neuropsychiatric disturbances of PD can be as disabling as its motor disorders but they have only recently begun to be studied intensively by clinicians and scientists In this book Patrick McNamara examines the major neuropsychiatric syndromes of PD in detail and offers a cognitive theory that accounts for both their neurology and their phenomenology McNamara offers an up to date review of current knowledge of such neuropsychiatric manifestations of PD as cognitive deficits personality changes speech and language symptoms sleep disorders apathy psychosis and dementia He argues that the cognitive mood and personality symptoms of PD stem from the weakening or suppression of the agentic aspects of the self McNamara's study may well lead to improved treatment for Parkinson's patients But its overarching goal is to arrive at a better understanding of the human mind and its breakdown patterns in patients with PD The human mind brain is an elaborate and complex structure patched together to produce what we call the self When we observe the disruption of the self structure that occurs with the various neuropsychiatric disorders associated with PD McNamara argues we get a glimpse into the inner workings of the most spectacular structure of the self the agentic self the self that acts

Making Sense of Social Movements Nick Crossley, 2002-01-16 effectively demonstrates the enduring importance of classical social movement theory and provides a cutting edge critical review of recent theoretical developments This is one of the most important general theoretical texts on social movements for some years Paul Bagguley University of Leeds Why and how do social movements emerge In which ways are social movements analysed Can our understanding be enhanced by new perspectives Making Sense of Social Movements offers a clear and comprehensive overview of the key sociological approaches to the study of social movements The author argues that each of these approaches makes an important contribution to our understanding of social movements but that none is adequate on its own In response he argues for a new approach which draws together key insights within the solid foundations of Pierre Bourdieu's social theory of practice This new approach transcends the barriers which still often divide European and North American perspectives of social movements and also those which divide recent approaches from the older collective behaviour approach The result is a theoretical framework which is uniquely equipped for the demands of modern social movement analysis The clear and concise style of the text as well as its neat summaries of key concepts and approaches will make this book invaluable for undergraduate courses It will also be an essential reference for researchers
