Agents As Objects With Knowledge Base State:

Agents As Objects With Knowledge Base State Nikolaos Skarmas, 1999-03-19 Advances in computer technology in general and computer networks in particular have significantly affected the requirements of modern applications where the need to operate in decentralised environments is of primary importance The conceptual models of the applications are also becoming complex and semantically rich A promising technology towards the design and development of systems of such domains is agent based systems Agents having a knowledge component act and interact with other agents and information sources in order to achieve some goals Platforms intended for supporting the development of such systems should offer a number of features including communication concurrency mobility high level data structures object orientation etc This book describes the design and implementation of such a language platform called April and its use on a number of applications Methodologically in designing and implementing the language a layered approach has been adopted April has been developed as a series of macro defined layers on top of the relatively primitive features of a pre existing language called April On top of April an agent layer has been built as a set of pre defined classes for constructing agent based systems This layer has been customised for specific application domains considered This includes a mobile agent application a distributed database application and a network management one Intelligent Agents VIII John-Jules C. Meyer, Milind Tambe, 2003-08-01 This volume is the eighth in the Intelligent Agents series associated with the ATAL workshops These workshops on Agent Theories Architectures and Languages have established themselves as a tradition and play the role of small but internationally well known conferences on the subject where besides theory per se also integration of theory and practice is in focus Specifically ATAL dresses issues of theories of agency software architectures for intelligent agents methodologies and programming languages for realizing agents and software tools for applying and evaluating agent based systems ATAL 2001 featured two special tracks in which both the more theoretical formal and the more practical aspects were present viz Formal Theories of Negotiation organized by Frank Dignum and Agents for Hand Held Mobile or Embedded Devices organized by Tim Finin There was also an extra session on RoboCup Rescue organized and presented by Satoshi Tadokoro and Ranjit Nair ATAL 2001 attracted 68 papers from over 20 countries all over the world of which 30 were selected for presentation at the workshop and publication in this volume We invited two outstanding speakers Fausto Giunchiglia Trento Italy and Tom Dean Brown USA *Intelligent Agents for Telecommunications Applications* Sahin Albayrak, 1998 Intelligent agent and distributed AI DAI approaches attach specific conditions to cooperative exchanges between intelligent systems that go far beyond simple functional interoperability Ideally systems that pursue local or global goals coordinate their actions share knowledge and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse grained systems The infrastructure of telecommunications is a world in transition There are a number of trends that contribute to this convergence of traditional telephony and data network worlds blurring of

boundaries between public and private networks complementary evolution of wireline wireless and cable network infrastructures the emergence of integrated broadband multimedia networks and of course the information superhighway Up to now despite the effort that has gone into this area the field of intelligent agents research has not yet led to many fielded systems Telecommunications applications pose strong requirements to agents such as reliability real time performance openness security management and other integrated management and mobility In order to fulfil their promise intelligent agents need to be fully dependable and typically require an integrated set of capabilities This is the challenge that exists for intelligent agents technology in this application domain

Intelligent Agents Michael J. Wooldridge, 1995-01-26 This volume coherently present 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included

Information Modelling and Knowledge Bases X Hannu Jaakkola, H. Kangassalo, Eiji Kawaguchi, 1999 LISTENING TO MUSIC is designed to help develop and refine the listening skills of your students and inspire a lifelong appreciation of music Author and award winning scholar teacher Craig Wright who has taught Music Appreciation courses for more than 35 years is consistently praised by reviewers and other professors for his unparalleled accuracy and his clear direct conversational style Throughout the book Wright connects with today's students by incorporating comparisons between pop and classical music and by using examples from popular artists to illustrate core concepts This chronological text succinctly covers traditional Western music from medieval to modern discussing examples from each historical period within their social contexts and the construction of each piece Later chapters cover popular music its impact on musical globalization and comparisons between Western and non Western music LISTENING TO MUSIC is the only text that provides Craig Wright's own Listening Exercises in the book and online which help students focus on important musical elements and episodes A free CD packaged with each printed copy of the text includes all of the musical examples for the Part 1 listening exercises A full set of optional online student resources includes Active Listening Guides streaming music an interactive eBook quizzing and more all to challenge your students All of the music discussed in the text is also available on CD and on Sony Music download cards Available with InfoTrac Student Collections <http://gocengage.com/infotrac>

Building Intelligent Agents Gheorghe Tecuci, 1998-06-23 Building Intelligent Agents is unique in its comprehensive coverage of the subject The first part of the book presents an original theory for building intelligent agents and a methodology and tool that implement the theory The second part of the book presents complex and detailed case

studies of building different types of agents an educational assessment agent a statistical analysis assessment and support agent an engineering design assistant and a virtual military commander Also featured in this book is Disciple a toolkit for building interactive agents which function in much the same way as a human apprentice Disciple based agents can reason both with incomplete information but also with information that is potentially incorrect This approach in which the agent learns its behavior from its teacher integrates many machine learning and knowledge acquisition techniques taking advantage of their complementary strengths to compensate for each others weakness As a consequence it significantly reduces or even eliminates the involvement of a knowledge engineer in the process of building an intelligent agent

Software Agent-Based Applications, Platforms and Development Kits Rainer Unland, Matthias Klusch, Monique Calisti, 2006-01-27 This book introduces major agent platforms frameworks systems tools and applications Each system is described by their developers in sufficient detail so that the reader can get a good understanding of the architecture functionality and application areas of the system All systems are running systems One main focus of the book lies on agent platforms and toolkits *Intelligent Autonomous Systems 6* Enrico Pagello, 2000 After a long period in which the research focused mainly on industrial robotics nowadays scientists aim to build machines able to act autonomously in unstructured domains and to interface friendly with humans while performing intelligently their assigned tasks Such intelligent autonomous systems are now being intensively developed and are ready to be applied to every field from social life to modern enterprises We believe the following years will be increasingly characterised by their extensive use This is dramatically changing the whole scenario of human society *Usability Evaluation and Interface Design* Michael J. Smith, Richard John Koubek, Gavriel Salvendy, Don Harris, 2001-08-01 This three volume set provides the complete proceedings of the Ninth International Conference on Human Computer Interaction held August 2001 in New Orleans A total of 2 738 individuals from industry academia research institutes and governmental agencies from 37 countries submitted their work for presentation at the conference The papers address the latest research and application in the human aspects of design and use of computing systems Those accepted for presentation thoroughly cover the entire field of human computer interaction including the cognitive social ergonomic and health aspects of work with computers The papers also address major advances in knowledge and effective use of computers in a variety of diversified application areas including offices financial institutions manufacturing electronic publishing construction and health care Computational Logic: Logic Programming and Beyond A.C. Kakas, F. Sadri, 2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for his pivotal role in creating and fostering the conceptual paradigm which is its raison d'être The diversity of interests covered here reflects the variety of Bob's concerns Read on It is an intellectual feast Before you begin permit me

to send him a brief personal but public message Bob how right you were and how wrong I was I should explain When Bob arrived in Edinburgh in 1967 resolution was as yet fairly new having taken several years to become at all widely known Research groups to investigate various aspects of resolution sprang up at several institutions the one organized by Bernard Meltzer at Edinburgh University being among the first For the half dozen years that Bob was a leading member of Bernard's group I was a frequent visitor to it and I saw a lot of him We had many discussions about logic computation and language

This proceedings volume of the 5th AOIS Workshop is an opportunity for looking back at five years of organizing AOIS workshops What did we achieve with the AOIS workshop series Where were we five years ago where are we now Did our theme impact on the information systems field in the way that we had hoped for AOIS workshops have taken place in Seattle Heidelberg Stockholm Austin Montreal Interlaken Toronto Bologna Melbourne and Chicago always in conjunction with a major conference on either multiagent systems in artificial intelligence AI MAS or information systems IS We have tried to innovate in holding these workshops as biconference events each year AOIS held two workshop events one at an AI MAS conference and one at an IS conference as well as using the AOIS web site as a medium for communication among researchers So certainly we have reached a wide audience of researchers around the world from both the AI MAS and IS communities But did we also manage to build up a dedicated AOIS community Five years ago we wrote Agent concepts could fundamentally alter the nature of information systems of the future and how we build them much like structured analysis ER modeling and Object Orientation has precipitated fundamental changes in IS practice Of course a period of five years is too short for evaluating the success or failure of a new scientific paradigm But still we may observe that while most IS conferences meanwhile list agents as one of their many preferred topics agent orientation is generally not considered to be a fundamental IS paradigm
