Alston, Matthew A. Andersen, Jennifer S. James, Philip G. Pardey, 2009-11-27 Agricultural science policy in the United States has profoundly affected the growth and development of agriculture worldwide not just in the United States Over the past 150 years and especially over the second half of the 20th Century public investments in agricultural R D in the United States grew faster than the value of agricultural production Public spending on agricultural science grew similarly in other more developed countries and collectively these efforts along with private spending spurred agricultural productivity growth in rich and poor nations alike The value of this investment is seldom fully appreciated The resulting productivity improvements have released labor and other resources for alternative uses in 1900 29.2 million Americans 39 percent of the population were directly engaged in farming compared with just 2.9 million 1.1 percent today while making food and fiber more abundant and cheaper The benefits are not confined to Americans U S

Mary Ahearn, 1998. Agricultural productivity in Africa. Benin, Samuel, 2016-07-14. Agricultural Productivity in Africa: Trends, Patterns, and Determinants presents updated and new analyses of land, labor, and total productivity trends in African agriculture. It brings together analyses of a unique mix of data sources and evaluations of public policies and development projects to recommend ways to increase agricultural productivity in Africa. This book is timely in light of the recent and ongoing growth recovery across the continent. The good news is that agricultural productivity in Africa increased at a moderate rate between 1961 and 2012, although there are variations in the rate of growth in land, labor, and total factor productivities depending on country and region. Differences in input use and capital intensities in agricultural production in the various farming systems and agricultural productivity zones also affect advancements in technology. One conclusion based on the book's research findings derives from the substantial spatial variation in agricultural productivity. For areas with similar agricultural productivity growth trends and factors, what works well in one area can be used as the basis for formulating best-fit, location-specific agricultural policies, investments, and interventions in similar areas. This finding, along with others, will be of particular interest to policy and decisionmakers.

ERS Staff Report, 1991. **Pesticide Policy, Production Risk, and Producer Welfare**. John M. Antle, 2015-07-30. The use of pesticides to control agricultural pests both benefits farm production and imposes health and environmental costs on producers and society. This title, first published in 1988, includes an application of the author's methodology to tomato production in which Antle illuminates the roles that alternative methods of pest management play in producer welfare. He also develops a more general empirical framework for studying producer welfare under uncertainty, a framework in which production risk, sequential decision making, and attitudes toward risk are integrated. This title will be of interest to students of environmental studies.
