*Science Fiction Film Directors, 1895-1998* Dennis Fischer, 2011-12-14 This enormous and exhaustive reference book has entries on every major and minor director of science fiction films from the inception of cinema circa 1895 through 1998 For each director there is a complete filmography including television work a career summary a critical assessment and behind the scenes production information Seventy nine directors are covered in especially lengthy entries and a short history of the science fiction film genre is also included *Animals in Detective Fiction* Ruth Hawthorn, John Miller, 2022-12-06 This book explores the vast array of animals that populate detective fiction If the genre begins as is widely supposed with Edgar Allan

Poe's Murders in the Rue Morgue 1841 then detective fiction's very first culprit is an animal. Animals moreover consistently appear as victims, clues, and companions while the abstract conception of animality is closely tied to the idea of criminality. Although it is often described as an essentially conservative form, detective fiction can unsettle the binary of human and animal to intersect with developing concerns in animal studies: animal agency, the ethical complexities of human-animal interaction, the politics and literary aesthetics of violence, and animal metaphor. Gathering its 14 essays into sections on ontologies, ethics, politics, and forms, *Animals in Detective Fiction* provides a compelling and nuanced analysis of the central role creatures play in this enduringly popular and continually morphing literary form. The Cambridge Companion to American Utopian Literature and Culture since 1945 Sherryl Vint, 2024-05-16. Providing a comprehensive overview of American thought in the period following World War II, after which the US became a global military and economic leader, this book explores the origins of American utopianism and provides a trenchant critique from the point of view of those left out of the hegemonic ideal. Centring the voices of those oppressed by or omitted from the consumerist American Dream, this book celebrates alternative ways of thinking about how to create a better world through daily practices of generosity, justice, and care. The chapters collected here emphasize utopianism as a practice of social transformation, not as a literary genre depicting a putatively perfect society, and urgently make the case for why we need utopian thought today. With chapters on climate change, economic justice, technology, and more, alongside chapters exploring utopian traditions outside Western frameworks, this book opens a new discussion in utopian thought and theory. **Monographic Series** Library of Congress, 1979. **Best Books for Young Adults** Holly Koelling, 2007-08-13. Revised edition of Best books for young adults. Betty Carter with Sally Estes and Linda Waddle. 2nd ed. c2000. **Creators of Science Fiction** Brian Stableford, 2009-11-01. Well-known critic and novelist Brian Stableford here discusses the writers, editors, and publishers who helped create the modern genre of science fiction: Mary Wollstonecraft Shelley, Edgar Allan Poe, Camille Flammarion, Jules Verne, H. G. Wells, Hugo Gernsback, John W. Campbell Jr., Edward E. Doc Smith, Robert A. Heinlein, James Blish, Gregory Benford, and Ian Watson. Complete with bibliography and index. *Affective Computing* Rosalind W. Picard, 2000-07-24. According to Rosalind Picard, if we want computers to be genuinely intelligent and to interact naturally with us, we must give computers the ability to recognize, understand, even to have and express emotions. The latest scientific findings indicate that emotions play an essential role in decision making, perception, learning, and more; that is, they influence the very mechanisms of rational thinking. Not only too much but too little emotion can impair decision making. According to Rosalind Picard, if we want computers to be genuinely intelligent and to interact naturally with us, we must give computers the ability to recognize, understand, even to have and express emotions. Part 1 of this book provides the intellectual framework for affective computing. It includes background on human emotions, requirements for emotionally intelligent computers, applications of affective computing, and moral and social questions raised by the technology. Part 2 discusses the design and construction of

affective computers Although this material is more technical than that in Part 1 the author has kept it less technical than typical scientific publications in order to make it accessible to newcomers Topics in Part 2 include signal based representations of emotions human affect recognition as a pattern recognition and learning problem recent and ongoing efforts to build models of emotion for synthesizing emotions in computers and the new application area of affective wearable computers
