**Textile Industry** Roshan Paul, Thomas Gries, 2024-06-27 Sustainable Innovations in the Textile Industry addresses advances taking place at every stage of the textile supply chain leading to improvements in sustainability and resource efficiency. There is a significant emphasis on respect for the environment in current thinking around textiles which contrasts with the impression many have of the industry due to its impact on global pollution over the past century. A key strength of the book is its comprehensive coverage of the complete textile process sequence including fibre to textile manufacture, dyeing, printing, finishing and effluent discharge. This holistic approach is required to effectively address the sustainability issue which requires action across the supply chain. In addition, it also provides the latest industry knowledge on technological advances in knitting, non-wovens, speciality chemicals, coating, printing, finishing and other methods that increase sustainability. Including historical aspects of sustainability in textiles as well as the state of the art in innovative sustainable fibers and manufacturing processes, this book is essential reading for anyone interested in sustainable directions in the textile industry. Emphasizes innovative production technologies, the biotransformation of the textile industry, the circular economy, recycling and the green future of textiles. Addresses sustainability in business and logistics, explaining how these functions influence the environmental impact of other stages of the value chain. Provides a guide to the eco labels and assessment methods used by industry.

**Textiles, Identity and Innovation: Design the Future** Gianni Montagna, Cristina Carvalho, 2018-10-03 D\_TEX presents itself as a starting point at a crossroads of ideas and debates around the complex universe of Textile Design in all its forms, manifestations and dimensions. The textile universe allied to mankind since its beginnings is increasingly far from being an area of exhausted possibilities; each moment proposing important innovations that need a presentation, discussion and maturation space that is comprehensive and above all inter and transdisciplinary. Presently, the disciplinary areas where the textile area is present are increasing and important, such as fashion, home textiles, technical clothing and accessories, but also construction and health among others, and can provide new possibilities and different disciplinary areas, allowing the production of new knowledge. D\_TEX proposes to join the thinking of design with technologies, tradition, techniques and related areas in a single space where ideas are combined with the technique and with the projectual and research capacity, thus providing for the creation of concepts, opinions, associations of ideas, links and connections that allow the conception of ideas, products and services. The interdisciplinary nature of design is a reality that fully reaches the textile material in its essence and its practical application through the synergy and contamination by the different interventions that make up the multidisciplinary teams of research. The generic theme of D\_TEX Textile Design Conference 2017 held at Lisbon School of Architecture of the University of Lisbon, Portugal on November 2-4, 2017 is Design the Future, starting from the crossroads of ideas and debates, a new starting point for the exploration of textile materials, their identities and innovations in all their dimensions.
