Crashworthiness of Transportation Systems: Structural Impact and Occupant Protection Jorge A.C.

Ambrósio, Manuel F.O. Seabra Pereira, F. Pina da Silva, 2012-12-06 A systematic treatment of current crashworthiness practice in the automotive railroad and aircraft industries Structural exterior and interior design occupant biomechanics seat and restraint systems are dealt with taking account of statistical data current regulations and state of the art design tool capabilities Occupant kinematics and biomechanics are reviewed leading to a basic understanding of human tolerance to impact and of the use of anthropometric test dummies and mathematical modelling techniques Different types of restraining systems are described in terms of impact biomechanics The material and structural behaviour of vehicle components is discussed in relation to crash testing A variety of commonly used techniques for simulating occupants and structures are presented in particular the use of multibody dynamics finite element methods and simplified macro elements in the context of design tools of increasing complexity which can be used to model both vehicles and occupants Audience An excellent reference for researchers engineers students and all other professionals involved in crashworthiness work

Baccouche, 2001 IUTAM Symposium on Impact Biomechanics: From Fundamental Insights to Applications M. D. Gilchrist, 2005-10-13 Substantial fundamental work has been undertaken in the different aspects of impact biomechanics over the past three decades Much of this has been motivated and undertaken by the automotive industry in their efforts to improve transport safety More recently however it has become apparent that the multidisciplinary synergies which are realised by interactions between engineers scientists and clinical practitioners will ultimately lead to a greater understanding of the complex interacting phenomena within the human body after it has sustained an impact In turn this greater depth of knowledge will provide more fundamental insights into the analysis diagnosis treatment and prevention of impact injuries across a broader spectrum of accident environments The scientific focus of this IUTAM symposium is to address those topics that are centrally important to the biomechanics of impact These can be grouped into those that are concerned with the different causes of accidents e.g transport occupational and sports injuries the mechanics involved in accident analysis e.g accident investigation computational modelling techniques the different types of resulting traumatic injuries including musculoskeletal organ spinal and head injuries methods of assessing the extent of injury e.g injury assessment injury criteria constitutive laws for human tissue and providing protection during an impact e.g injury prevention energy absorption materials and safety devices
