Sports Nutrition Mark Kern, 2019-12 The landscape of sports nutrition is dramatically altering as those in search of optimal performance are moving the field from haphazard alchemy to exact science. Currently thousands of products from ancient herbs and old standards to hormone extractions and test tube concoctions compete for a place at the training table of both professional and amateur competitors as well as those non athletes seeking some potent elixir of youth. Unfortunately getting straight and genuinely relevant information on these products can be a time consuming and frustrating challenge. The CRC Desk Reference on Sports Nutrition following in the tradition of authoritative CRC references will place in your hands the most comprehensive desk reference available on sports nutrition products. Intelligently organized each entry depending upon its prominence and importance is followed either by a definition paragraph essay composition article or feature article. Many of the more complex entries are supported with figures or tables. While the authors have adhered to the principles of scientific discipline they have also taken the effort to make the text highly accessible to anyone with an interest in sports nutrition. Extremely relevant the listings include important issues regarding exercise metabolism and performance recent products both legal and illegal as well as common dietary supplements and traditional herbs. Recent events make it clear that it is becoming more and more challenging for practitioners to adhere to the Hippocratic caveat of do no harm as supplements become more potent and potentially more dangerous. With its desk reference on sports nutrition CRC has taken the lead in helping to meet that challenge. Nutrition in Pharmacy Practice Ira Wolinsky, Louis Williams, 2002. This book provides pharmacists with the information needed to make sound decisions and gives patients accurate advice in nutrition counseling. Based on a survey conducted by the American Pharmaceutical Association, this book equips pharmacists with the knowledge to advise patients on nutrition, weight control, diet, and disease; nutrient-drug interactions; pediatric nutrition; enteral and parenteral nutrition; ergogenic aids; and herbal supplements. The book's nine chapters have been thoroughly researched and referenced, and highly useful appendices include dietary reference intakes and tolerable upper intake levels, selected nutrition references, and selected websites.

Preventive Nutrition Adrienne Bendich, Richard J. Deckelbaum, 2001-03-06. Nutrition has been recognized as a major determinant of health for centuries. Traditionally, nutritional sciences have primarily targeted the prevention of diseases resulting from clinical deficiencies of essential nutrients such as scurvy and rickets. Contemporary nutritional research has focused on the prevention of major diseases of Western civilization, particularly cardiovascular disease and cancer, as well as promoting maternal and child health and healthy aging. Heart disease and cancer, which were rare in most developing countries several decades ago, are increasing dramatically in these countries in parallel with economic development and dietary transitions: decreases in infectious diseases and increasing sedentary lifestyle and obesity. Substantial evidence indicates that major chronic diseases such as coronary heart disease, type 2 diabetes, and some cancers are largely preventable by relatively simple diet and lifestyle modifications. Despite the great potential of nutrition in preventing diseases and improving health, nutrition is not routinely emphasized in the education and training of physicians and other health care professionals. This has resulted in inadequate nutritional knowledge and lack of skills in providing dietary counseling among many health care professionals. Furthermore, in the past decade, the public's access to nutritional information has been increasing rapidly, particularly through the Internet. There are now hundreds of websites providing a wide range of nutritional information, and selling numerous dietary products. Because of the explosion in nutritional information, the public's demand for nutritional advice has been increasing rapidly and will continue to rise.
