Health and safety regarding ionising and non-ionising medical instruments

Health and safety executive (HSE) legislations:

The HSE is a legislative body responsible for regulating and enforcing health and safety matters in medical establishments in the UK. The organisation carries out numerous inspections on the use of specific medical instrumentation and equipment as well as the operating conditions of staff and works with the law to ensure that the findings of its reports are properly enforced where necessary. In conjunction with this enforcement agency, regulation of medical devices and medicines is the responsibility of the Medicines and Healthcare products Regulatory Agency (MHRA). This is an executive agency of the Department of Health (DoH). It works with the law to ensure that the findings of its reports are properly enforced where necessary. As yet, there are no proton beam synchrotrons available in the UK. A few current HSE are:

- The IRR17: This requires employers to keep exposure to ionising radiations as low as reasonably practicable. Exposures must not exceed specified dose limits.
- Radioactive Substances Act 1993: This is the control of radioactive waste to protect the environment.
- REPPIR (The Radiation (Emergency Preparedness and Public Information) Regulations 2001).

Safe operating procedures (SOP):

SOP are procedures put in place to protect both patients and doctors from ionising and non-ionising radiation equipment such as, dosage of radiation. This is because safety from harm is their priority.

The few procedures for the doctor are:

- All medical staff using the equipment must have qualified and relevant training.
- They must be confident and knowledgeable about the operations and its limitations.
- Confirm the medical details with the patients before they go along with the treatment.
- Take full responsibility of the procedure.
