The Science of Composting Marco de Bertoldi, 2013-11-11 The European Union initially demonstrated its interest in waste in the late 70s with the programme on Waste Recycling Research and Development At that time composting was only present as a coordination activity and it was only later that specific research programmes in the area were within Europe which was largely instrumental in setting up a series of European conferences seminars and work shops Some of these have resulted in publications which have made significant contributions to developments in the understanding of composting and the use of composts In particular the outputs from meetings in Oxford 1984 Udine 1986 Neresheim 1988 and Angers 1991 are worthy of note Composting has seen significant changes since the 70s when the major thrust in Europe was using mixed municipal solid waste as a feed material Many composting plants which were built to use this material were closed due to the poor quality of the compost which made it very difficult to market As a result the main areas of interest as far as the municipalities are concerned are now with biowaste and source separated organics This interest is apparent from the many new plants which are being constructed across Europe and the ready market which exists for the products In parallel with the renewed interest of the municipalities other areas such as agriculture and the wastewater treatment industries are also developing their own schemes
