LEVELS OF PREVENTION,  
ADVANCE DIRECTIVES)**Bathing**

Teach the parents proper newborn bathing techniques by a demonstration.  
Have the parents return the demonstration.

**Underlying Principles**

The nurse should assess family's readiness for discharge and care of newborn by:  
Assess home environment ready for newborn.  
History, experience & knowledge  
Parent-Newborn bond.  
Parents adjustment to the role.  
Social support.  
Emotional readiness.  
Parents ability to teach back education of newborn care.

**Nursing Interventions**

WHO? WHEN? WHY? HOW?

**Skin care**

The eyes are cleaned using a clean portion of the wash cloth. The newborn should be washed, rinsed, and dried with no soap left on the skin.

**Infant safety**

Do not leave the newborn unattended during the bath. Hot water heater should be set at 49° c (120.2° f) or less. The room should be warm, and the bath water should be at 36.6° to 37.2° c (98° to 99° f). Bath water should be tested on the inner wrist prior to use.

**Order of giving the bath**

Move from the cleanest to the dirtiest areas of the newborn's body, which includes starting with the eyes, face, and head; proceeding to the chest, arms, and legs; and washing the groin area last. The eyes are cleaned by moving from the inner to the outer canthus.

**Preventing complications**

Bathing by immersion is not done until the umbilical cord falls off and the circumcision is healed. Do not bathe the newborn immediately after feeding to prevent spitting up and vomiting. After cleansing the uncircumcised newborn male, the foreskin should not be forced back. In female newborns, wash the vulva by wiping from front to back.
