Carlos-Vivas, Noelia Belando Pedreño, Manuel Gómez-López, Paulo Jorge Martins, David Manzano Sánchez, 2024-10-10 Today's society demands to train children and adolescents who develop in an environment based on respect and the promotion of educational values. This aspect is especially relevant to promoting physical activity and its relationship with healthy habits such as the consumption of unprocessed foods, the reduction of a sedentary lifestyle and the improvement of adherence to sports. In this sense, the World Health Organization warns that the current rates of overweight and obesity are very high and that we must combat them. From formal education, you can help improve healthy habits with educational programs and especially in Physical Education, a subject where the work of physical, social and cognitive well-being has special relevance. Since the 20th century, studies and research that have aimed to combat unhealthy habits in educational centres and sports schools have increased. Challenges and Solutions of Oncological Hyperthermia

Andras Szasz, 2020-04-02 The next generation of oncological hyperthermia involves the medical innovation of selectively heating up the malignant cells of the body in a controlled way. The easily distinguishable biophysical and physiological characteristics of cancer cells and their immediate environment are the focus of the targeted energy delivery of this treatment. This heterogenic heating concept breaks with the homogeneous nature of conventional hyperthermia where an isothermally equal temperature is applied to the large surface area of a solid tumor. Due to its selectivity, the new concept enables the usage of a significantly lower energy, making it safer, less toxic and easier to use. This book shows the challenges facing oncological hyperthermia and highlights clinical results obtained in various countries. It also presents discussions about the theoretical basis of the method, adding some technical discussions and clarifying the most difficult points of its design. The contributions dealing with clinical results use state-of-the-art conventional therapies with complementary hyperthermia and show the advantages of such a combination.
