**Embodied Spirituality in a Sacred World** Michael Washburn, 2012-02-01 Anyone seeking a deeper understanding of human spirituality will find something of value in Michael Washburn's new book Drawing on a rich variety of psychoanalytic Jungian and existential phenomenological sources and on both Western and Asian spiritual texts Embodied Spirituality in a Sacred World provides a theoretical foundation for the idea that human development follows a spiral path Washburn shows that ego development early in life requires us to turn our backs on original sources of our existence and therefore that spiritual development later in life requires us to spiral back to these sources on the way to whole psyche integration He elucidates the underlying causes and pivotal events that set development on its spiral course and traces six major dimensions of experience as they unfold along the spiral path the unconscious the energy system the ego system the perceived other the experiential body and the life world In providing a theoretical foundation for the idea of the spiral path Washburn defends the idea against its critics and helps explain why the idea has been compelling to so many people in diverse traditions

**How the Maya Built Their World** Elliot M. Abrams, 1994 Maya architecture is often described as massive and monumental but experiments at Copan Honduras convinced Elliot Abrams that 300 people could have built one of the large palaces there in only 100 days In this groundbreaking work Abrams explicates his theory of architectural energetics which involves translating structures into volumes of raw and manufactured materials that are then multiplied by the time required for their production and assembly to determine the labor costs of past construction efforts Applying this method to residential structures of the Late Classic period A D 700 900 at Copan leads Abrams to posit a six tiered hierarchic social structure of political decision making ranging from a stratified elite to low ranking commoners By comparing the labor costs of construction and other economic activities he also prompts a reconsideration of the effects of royal construction demands on commoners How the Maya Built Their World will interest a wide audience in New and Old World anthropology archaeology architecture and engineering

**NBS Special Publication** ,1972 Personal Reality, Volume 2 Daniel Paksi, 2019-05-13 Western civilization was built on the concept of God Today modern science based on the critical method and so called objective facts denies even the existence of our soul There is only matter atoms molecules and DNA sequences There is no freedom there are no well grounded beliefs The decline of Western civilization is not the simple consequence of decadence hedonism and malevolence Modern critical science has liberated us from the old dogmas but failed to establish our freedoms values and beliefs However human knowledge is not objective but personal We are the children of evolution Everybody sees the world from his own personal point of view anchored into his her body We use our billions of years old evolutionary skills and thousands of years old cultural heritage to recognize and acknowledge the personal facts of our reality freedom and most important natural beliefs respect and speak the truth In reality even science itself is based on our personal knowledge Only our false conceptual dichotomies paralyze our thinking God or matter there is a third choice the emergence of life and human persons This is the only way to defend our freedoms and the Christian moral dynamism of free Western societies

*Phenomenological Approaches to Sport* Irena Martínková, Jim Parry, 2013-09-13 The study of sport is often thought of simply in terms of the sport sciences This book explains how a phenomenological approach is capable of revealing the nature and meanings of sport in ways that are beyond the reach of the sciences and how the very concepts required by sport science stand in need of philosophical explanation The book has a didactic intention seeking to present and discuss ideas and tools developed in the phenomenological tradition in order to illuminate issues in sport in such a way as to be understandable for those without any previous knowledge or background There are clear and straightforward accounts of the ideas of central thinkers such as Husserl Heidegger Merleau Ponty and Pato ka and applications of central ideas to the analysis of particular issues such as the nature of risk sports the feint in football the problem of the instant replay the role of the sport psychologist the idea of bodily perception and the concept of transhumanism in relation to performance enhancement This book was originally published as a special issue of Sport Ethics and Philosophy

**Marxism, Revolution and Utopia** Herbert Marcuse, 2014-03-26 This collection assembles some of Herbert Marcuse s most important work and presents for the first time his responses to and development of classic Marxist approaches to revolution and utopia as well as his own theoretical and political perspectives This sixth and final volume of Marcuse s collected papers shows Marcuse s rejection of the prevailing twentieth century Marxist theory and socialist practice which he saw as inadequate for a thorough critique of Western and Soviet bureaucracy and the development of his revolutionary thought towards a critique of the consumer society Marcuse s later philosophical perspectives on technology ecology and human emancipation sat at odds with many of the classic tenets of Marx s materialist dialectic which placed the working class as the central agent of change in capitalist societies As the material from this volume shows Marcuse was not only a theorist of Marxist thought and practice in the twentieth century but also proves to be an essential thinker for understanding the neoliberal phase of capitalism and resistance in the twenty first century A comprehensive introduction by Douglas Kellner and Clayton Pierce places Marcuse s philosophy in the context of his engagement with the main currents of twentieth century philosophy while also providing important analyses of his anticipatory theorization of capitalist development through a neoliberal restructuring of society The volume concludes with an afterword by Peter Marcuse
