Education and Training for Clinical Chemistry M. Rubin, P. Lous, 2012-12-06 While the historic roots of clinical chemistry originate from the chemical sciences the growth of the subject has been dependent upon the political social economic and technologic national soil in which it has developed Thus the present leaders in this field have backgrounds variously in chemistry medicine pharmacy or sometimes biology Today clinical chemistry has attained stature as a unified independent discipline It is characterized by active and productive international and national societies its function codified in the law of many countries its scientific content the sole subject of international and national journals as well as textbooks and educational programs and its international regional and national meetings have become focal points for major exchange of scientific clinical and technical information and exhibition The positive impact of the discipline upon the delivery of health care has given it a significant position in the economics of public health As a consequence it has become the most rapidly growing segment of the industrial and commercial component of health maintenance These changes have brought the need to define the educational and training processes to prepare future leaders of clinical chemistry The diverse backgrounds of the present directors of clinical chemical laboratories has required that the viewpoints of chemists pharmacists physicians and biologists be brought into harmony This has been achieved by the years of discussion debate and review by colleagues of varied professional backgrounds This monograph reflects their consensus viewpoint for the practice of clinical chemistry at its most advanced level **The 1984 Guide to the Evaluation of Educational Experiences in the Armed Services** American Council on Education, 1984 *Army Service Forces Manual*, 1944 Bulletin - Bureau of Education United States. Kohler, 1982-05-31 This penetrating case study of

institution building and entrepreneurship in science shows how a minor medical speciality evolved into a large and powerful academic discipline Drawing extensively on little used archival sources the author analyses in detail how biomedical science became a central part of medical training and practice The book shows how biochemistry was defined as a distinct discipline by the programmatic vision of individual biochemists and of patrons and competitors in related disciplines It shows how discipline builders used research programmes as strategies that they adapted to the opportunities offered by changing educational markets and national medical reform movements in the United States Britain and Germany The author argues that the priorities and styles of various departments and schools of biochemistry reflect systematic social relationships between that discipline and biology chemistry and medicine Science is shaped by its service roles in particular local contexts This is the central theme The author's view of the political economy of modern science will be of interest to historians and social scientists scientific and medical practitioners and anyone interested in the ecology of knowledge in scientific institutions and professions
