Reading and Dyslexia Thomas Lachmann, Tina Weis, 2018-07-28 In this volume a group of well known experts of the field cover topics ranging from basic visual and auditory information processing to higher order cognition in reading and dyslexia from basic research to remediation approaches and from well established theories to new hypotheses about reading acquisition and causes for its failure Reading is one of the most intriguing feats human evolution ever came up with There is no evolutionary basis for reading as such reading is secondary to language and the result of a complex skill acquisition at the end of which almost all pre existing cognitive functions are mobilized With the right instruction and practice most people learn this skill smoothly Some however have problems despite same opportunities and general cognitive abilities This developmental dyslexia results from a neuro developmental disorder leading to deficits in reading relevant information processing But what deficits are these and can they be trained The Impact of Learning to Read on Visual Processing

Tânia Fernandes, Regine Kolinsky, 2016-01-26 Reading is at the interface between the vision and spoken language domains An emergent bulk of research indicates that learning to read strongly impacts on non linguistic visual object processing both at the behavioral level e g on mirror image processing enantiomorphy and at the brain level e g inducing top down effects as well as neural competition effects Yet many questions regarding the exact nature locus and consequences of these effects remain hitherto unanswered The current Special Topic aims at contributing to the understanding of how such a cultural activity as reading might modulate visual processing by providing a landmark forum in which researchers define the state of the art and future directions on this issue We thus welcome reviews of current work original research and opinion articles

that focus on the impact of literacy on the cognitive and or brain visual processes In addition to studies directly focusing on this topic we will consider as highly relevant evidence on reading and visual processes in typical and atypical development including in adult people differing in schooling and literacy as well as in neuropsychological cases e g developmental dyslexia We also encourage researchers on nonhuman primate visual processing to consider the potential contribution of their studies to this Special Topic

Contemporary Perspectives on Reading and Spelling Clare Wood,Vincent Connelly,2009-09-10 With contributions from leading international researchers Contemporary Perspectives on Reading and Spelling offers a critique of current thinking on the research literature into reading reading comprehension and writing Each paper in this volume provides an account of empirical research that challenges aspects of accepted models and widely accepted theories about reading and spelling This book develops the argument for a need to incorporate less widely cited research into popular accounts of written language development and disability challenging the idea that the development of a universal theory of written language development is attainable The arguments within the book are explored in three parts overarching debates in reading and spelling reading and spelling across languages written language difficulties and approaches to teaching Opening up the existing debates and incorporating psychological theory and the politics surrounding the teaching and learning of reading and spelling this edited collection offers some challenging points for reflection about how the discipline of psychology as a whole approaches the study of written language skills Highlighting ground breaking new perspectives this book forms essential reading for all researchers and practitioners with a focus on the development of reading and spelling skills

Differential Diagnosis and Treatment of Children with Speech Disorder Barbara Dodd,2013-05-30 Paediatric speech and language therapists are challenged by diminished resources and increasingly complex caseloads The new edition addresses their concerns Norms for speech development are given differentiating between the emergence of the ability to produce speech sounds articulation and typical developmental error patterns phonology The incidence of speech disorders is described for one UK service providing crucial information for service management The efficacy of service provision is evaluated to show that differential diagnosis and treatment is effective for children with disordered speech Exploration of that data provides implications for prioritising case loads The relationship between speech and language disorders is examined in the context of clinical decisions about what to target in therapy New chapters provide detailed intervention programmes for subgroups of speech disorder delayed development use of atypical error patterns inconsistent errors and development verbal dyspraxia The final section of the book deals with special populations children with cognitive impairment hearing and auditory processing difficulties The needs of clinicians working with bilingual populations are discussed and ways of intervention described The final chapter examines the relationship between spoken and written disorders of phonology

Psychology, Development and Social Policy in India R. C. Tripathi,Yoganand Sinha,2013-08-05 This book examines how and where psychology can engage itself in the framing of social policies for national as well as human development in India Although the role that psychological knowledge can play in informing social policy decisions has been discussed for a long time psychologists by and large have had little role in framing policy decisions related to such important domains as education health social justice and social inclusion Policy makers not only in India but more or less everywhere have focused on interventions at the macro level which has led them to ignore the root causes of the problems lying at the micro level However with the more humanistic

approaches now being followed by economists and other social scientists the person in society is slowly taking centre stage. Micro level variables like happiness, the wellbeing of individuals and the social relationships within which people define themselves are becoming important. Therefore this book discusses important psychological issues related to human development, particularly health and education, social justice, social integration, environment and work organizations, besides focusing on some general issues relating to the logic of making social policies. It is a first ever attempt in India to inform policy makers about how micro variables can be a crucial factor to consider while framing social policies.

What can we make of theories of embodiment and the role of the human mirror neuron system? Analía Arevalo, Juliana Baldo, Fernando González-Perilli, Agustín

Ibanez, 2016-03-09 In recent years work surrounding theories of embodiment and the role of the putative mirror neuron system (MNS) in humans has gained considerable attention. If humans have developed a network of neurons that fire in response to other beings' actions as has been shown in macaques, this system could have vast implications for all kinds of cognitive processes unique to humans such as language learning, empathy and communication in general. The goal of tapping into and understanding such a system is a fascinating yet challenging one. One form of embodiment, embodied linguistics, suggests that the way we process linguistic information is linked to our physical experience of the concept conveyed by each word. The interaction between these cognitive systems, i.e. language and motor processing, may occur thanks to the firing of neurons making up the MNS. The possible interdependence between different cognitive systems has implications for healthy as well as pathological profiles and in fact work in recent years has also explored the role of embodiment and/or the MNS in clinical populations such as stroke, Parkinson's Disease, Alzheimer's Disease and Autism among others. Research on embodiment and/or the MNS has been approached with a number of different methodologies but the results obtained with these different methodologies have not been entirely consistent, generating doubts regarding the theories. The question has been raised as to what this line of inquiry can gain from the types of evidence contributed by functional neuroimaging methods carried out with healthy volunteers versus behavioral or lesion/symptom mapping methods employed with neurologically compromised individuals. Of particular interest are the clinical applications of this line of research. If indeed a system exists which reflects a tight link between, for example, the human language and motor systems, then the obvious challenge is to tap into this system to create useful therapies that can provide rehabilitation where damage has occurred. This Research Topic brought together work conducted with healthy and patient populations using several behavioral and imaging techniques as well as insightful commentaries and opinion pieces. We believe the combined work of the participating authors is an important contribution to this intriguing line of research and an excellent point of reference for future work.

Cross-Linguistic Study of Acquired Reading Disorders Prathibha Karanth,2003-12-31 This volume focuses on cross linguistic studies of the acquired disorders of reading and what they can tell us about the models of reading and the human brain The author has compiled a source book on cross linguistic studies of reading disorders with data from the alphasyllabaries of India in addition to showing the implications of these findings on the understanding of reading its acquisition and the developmental and acquired reading disorders and their management *Attention in Cognitive Systems. Theories and Systems from an Interdisciplinary Viewpoint* Lucas Paletta,Erich Rome,2007 This volume provides a much needed interdisciplinary angle on the subject of attention in cognitive systems It constitutes the thoroughly refereed post workshop proceedings of the 5th International Workshop on Attention in Cognitive Systems held in Hyderabad India in January 2007 The 31 papers are organized in topical sections that cover every aspect of the subject from the embodiment of attention and its cognitive control to the applications of attentive vision *Reading Complex Words* Egbert M.H. Assink,Dominiek Sandra,2013-06-29 In a series of fourteen chapters this book brings together current research findings on the involvement of word internal structure for the purpose of word reading especially morphological structure Contributors include many leading experts in this research domain The central theme of reading complex words is approached from several angles such that the chapters span a wide variety of topics where this issue is important The experiments reported in the book involve different populations children expert readers illiterates different languages Chinese Dutch English French Hebrew Italian Turkish Serbian different processing levels where morphology may play a role sublexical supralexical different variables which may determine morphological effects morphological type semantic transparency branching relations among morphemes Given this scope the book offers a good state of the art platform in current psycholinguistic research on the topic *Reading Complex Words* Cross Language Studies is a valuable resource for all researchers studying the mental lexicon and to those who teach advanced courses in the psychology of language *Students with Both Gifts and Learning Disabilities* Tina A. Newman,Robert J. Sternberg,2012-12-06 We were motivated to edit this book when we began to hear stories of exceptional students who were struggling with reading writing or math but who could solve seemingly any problem with computers or build the most intricate structures with Legos or could draw beautiful pictures or could tell the most creative stories but ended up in tears when asked to write it out How is it possible to have so much talent in some areas and yet to appear to have a disability in another What resources are available for these students How can we ensure that these students abilities are nurtured and developed Our goal in this book is to provide ideas and possibly even tentative answers for educators and to stimulate more questions to be answered by researchers We have ourselves been addressing

related questions for some time. Our group at the PACE Center at Yale has explored the development of abilities, competencies, and expertise that allow people to be successful in life. Through this work, we have collaborated with school districts and other educators and researchers across the country to expand the notion of what is traditionally thought of as intelligence. We use the concept of successful intelligence to allow for the possibility that the skills traditionally taught in school are not the only ones and often not even the most important ones that allow people to be successful in the world.
