Automorphic Forms Beyond GL_2 Ellen Elizabeth Eischen, Wee Teck Gan, Aaron Pollack, Zhiwei Yun, 2024-03-26 The Langlands program has been a very active and central field in mathematics ever since its conception over 50 years ago. It connects number theory, representation theory, and arithmetic geometry and other fields in a profound way. There are nevertheless very few expository accounts beyond the GL_2 case. This book features expository accounts of several topics on automorphic forms on higher rank groups including rationality questions on unitary group theta lifts and their applications to Arthur's conjectures, quaternionic modular forms, and automorphic forms over function fields and their applications to inverse Galois problems. It is based on the lecture notes prepared for the twenty-fifth Arizona Winter School on Automorphic Forms beyond GL_2 held March 5-9, 2022 at the University of Arizona in Tucson. The speakers were Ellen Eischen, Wee Teck Gan, Aaron Pollack, and Zhiwei Yun. The exposition of the book is in a style accessible to students entering the field. Advanced graduate students as well as researchers will find this a valuable introduction to various important and very active research areas. Inclusions in Prokaryotes Jessup M. Shively, 2006-05-04 The new series Microbiology Monographs begins with two volumes on intracellular components in prokaryotes. In this first volume, *Inclusions in Prokaryotes*, the components labeled inclusions are defined as discrete bodies resulting from synthesis of a metabolic product. Research on the biosynthesis and reutilization of the accumulated materials is still in progress, and interest in the inclusions is growing. This comprehensive volume provides historical background and comprehensive reviews of eight well-known prokaryotic inclusions. **Principles of Biochemical Toxicology, Third Edition** John Timbrell, 1999-10-21 Research into the biochemical basis of toxicology has expanded rapidly over recent years amidst concerns over the adverse effects of drugs, environmental pollution, and occupational hazards. Following on from the acclaimed first two editions of *Principles of Biochemical Toxicology*, John Timbrell has expanded the text to include summary sections, questions, and model answers, thoroughly revised artwork. These features, plus the new easy-to-read format, will make biochemical toxicology more accessible to undergraduates and postgraduates coming across the subject for the first time, particularly when undertaking self-directed study. This comprehensive textbook provides a thorough explanation of dose-response relationships, disposition, and metabolism, toxic responses to foreign compounds, and detailed examples to illustrate mechanisms of toxicity. There is also an expanded and updated bibliography directing the reader to further reading if required. Students and lecturers will find the clear and concise approach, which established this book as the leading textbook in its field, an essential aid to learning and teaching. *Nuclear*
