An introduction to the use of probability models for analyzing risk and economic decisions using spreadsheets to represent and simulate uncertainty This textbook offers an introduction to the use of probability models for analyzing risks and economic decisions It takes a learn by doing approach teaching the student to use spreadsheets to represent and simulate uncertainty and to analyze the effect of such uncertainty on an economic decision Students in applied business and economics can more easily grasp difficult analytical methods with Excel spreadsheets The book covers the basic ideas of probability how to simulate random variables and how to compute conditional probabilities via Monte Carlo simulation The first four chapters use a large collection of probability distributions to simulate a range of problems involving worker efficiency market entry oil exploration repeated investment and subjective belief elicitation The book then covers correlation and multivariate normal random variables conditional expectation optimization of decision variables with discussions of the strategic value of information decision trees game theory and adverse selection risk sharing and finance dynamic models of growth dynamic models of arrivals and model risk New material in this second edition includes two new chapters on additional dynamic models and model risk new sections in every chapter many new end of chapter exercises and coverage of such topics as simulation model workflow models of probabilistic electoral forecasting and real options The book comes equipped with Simtools an open source free software used throughout the book which allows students to conduct Monte Carlo simulations seamlessly in Excel      *Basic Statistics in Business and Economics* George William Summers, William Stanley Peters, Charles P. Armstrong, 1981      [The Manual of Strategic Economic Decision Making](#) Jeff Grover, 2016-11-29

This book is an extension of the author's first book and serves as a guide and manual on how to specify and compute 2 3 and 4 Event Bayesian Belief Networks BBN It walks the learner through the steps of fitting and solving fifty BBN numerically using mathematical proof The author wrote this book primarily for inexperienced learners as well as professionals while maintaining a proof based academic rigor The author's first book on this topic a primer introducing learners to the basic complexities and nuances associated with learning Bayes theorem and inverse probability for the first time was meant for non statisticians unfamiliar with the theorem as is this book This new book expands upon that approach and is meant to be a prescriptive guide for building BBN and executive decision making for students and professionals intended so that decision makers can invest their time and start using this inductive reasoning principle in their decision making processes It highlights the utility of an algorithm that served as the basis for the first book and includes fifty 2 3 and 4 event BBN of numerous variants      *Economic Decisions Under Uncertainty* Hans-Werner Sinn, 2012-12-06

The

Fundamental Issues Involved Why do we need a theory of uncertainty It is a fact that almost all man s economic decisions are made under conditions of uncertainty but this fact alone does not provide a strong enough argument for making the effort necessary to generalize ordinary preference theory designed for a world of perfect certainty In accordance with Occam s Razor the mathematician may well welcome a generalization of assumptions even if it does not promise more than a restatement of known results The economist however will only be well disposed towards making the effort if he can expect to achieve new insights and interesting results for he is interested in the techniques necessary for the generalization only as means to an end not as ends in themselves A stronger reason for developing a theory of uncertainty therefore seems to be the fact that there are kinds of economic activities to which the non stochastic preference theory has no access or has access only through highly artificial constructions Such activities include portfolio decisions of wealth holders speculation and insurance These will be considered in detail in the last chapter of the book The main purpose of this book however is not to apply a theory of uncertainty to concrete economic problems the purpose rather is to formulate such a theory
